

We Are One AECI, for a Better World

Sustainability Report for the year ended
31 December 2025

A perspective on our approach to sustainability

AECI's sustainability approach is centred on how the Group creates, preserves and protects value over the long term. In this context, sustainability is not treated as a parallel agenda, but as a core business discipline that supports competitiveness, resilience and responsible growth. Our 2025 performance demonstrates continued progress in embedding environmental, social and governance priorities into decision making, operations and oversight.

During the year, we continued to strengthen the integration of sustainability across the Group, with particular emphasis on safety, environmental performance, governance and social impact. Our approach recognises that sustainable performance is achieved through consistent leadership, sound decision making and operational accountability.

Zero

fatalities

0.20

Total recordable incident rate (TRIR)

35%

improvement in TRIR year-on-year

We preserved value through continued focus on those matters most critical to operational resilience, governance and responsible performance. Safety remains a core value, and we are pleased to report

This reflects sustained effort to embed a culture of care, accountability and visible leadership through **Beyond Zero**.

The reporting period highlighted the importance of maintaining disciplined focus on those areas where unmanaged risk can erode value. The increase in our process safety rate (PSTIR) from 0.64 in 2024 to 0.81 in 2025 underscores the need for continued vigilance, rigorous process safety management and strong critical control effectiveness in high risk environments.

At the same time, climate-related pressures, regulatory change and rising stakeholder expectations continue to shape our operating context. Our response is therefore focused not only on capturing opportunity, but also on proactively managing those risks that could undermine resilience, reputation and long-term value.

During the year, we continued to create value through targeted sustainability actions that strengthen long-term resilience and competitiveness. We continued to make measurable progress against our environmental commitments.

- Scope 1 and Scope 2 emissions reduced by 10% year on year
- Progress driven by energy efficiency measures and lower carbon interventions
- supported by targeted energy efficiency initiatives and lower carbon interventions across the business
- advanced the development of our Net Zero pathway, strengthening our understanding of key decarbonisation levers, transition requirements and the actions needed to support our long-term climate ambition

We also continued to create social value through initiatives that contribute to more resilient and empowered communities in the areas in which we operate. These interventions support sustainable impact, strengthen stakeholder relationships and reinforce our licence to operate.

R33m

social responsibility spend

~103 000

beneficiaries impacted

378

new jobs created

42

enterprises supported

We strengthened our sustainability and EHS governance and continued to enhance reporting maturity, supporting clearer accountability, stronger oversight and greater alignment with evolving disclosure expectations. These actions help protect the integrity of our performance, support informed decision making and preserve stakeholder confidence.

Outlook

While challenges remain, including safety risks, climate related impacts, regulatory change and rising stakeholder expectations, we remain committed to disciplined execution and continuous improvement. The progress reflected in this report provides a strong foundation for the future and reinforces our commitment to creating enduring value through a business that is safer, more resilient and better positioned for a lower carbon future.

Taken together, our 2025 sustainability performance reflects a balanced and integrated approach to value creation.

Introduction

About this report

Sustainability Report

Our **Sustainability Report** provides environmental and social impacts on stakeholder value in the short-, medium- and long-term.

Integrated Report

Our Integrated Report, our primary annual report to stakeholders for the period **1 January 2025 to 31 December 2025**, provides a concise and transparent view of our progress in transforming and preparing the Group for long-term sustainable value creation.

Financial Disclosures

Our **Annual Financial Statements** provide a comprehensive overview of the Group's financial position and performance. The information disclosed can be used to assess AECI's financial performance, strength and prospects.

Remuneration Report

Our **Remuneration Report** provides information of our remuneration framework structure, our employee value proposition, the remuneration outcomes and how they align with long-term value for stakeholders and the achievement of our strategy.

Notice of Annual General Meeting

Our **Notice of the Annual General Meeting (AGM)** includes the form of proxy, shareholding profile and essential information for shareholders.

Assuring the integrity of our report

Deloitte & Touche completed an independent limited assurance review of selected key performance indicators (KPIs) for the Group, resulting in an unmodified assurance report.

Refer to Appendix C on pages 88 to 89 of this report

Reporting frameworks applied in the preparation of our report

Our sustainability initiatives align with well-established reporting frameworks to ensure transparency, accountability and meaningful contributions to our stakeholders and communities. We consider and apply the following:

- International Financial Reporting Standards (IFRS)
- IFRS S1: General Requirements for Disclosures of Sustainability Related Financial Information
- IFRS S2 Sustainability Disclosure Standard Climate-related Disclosures
- The International Sustainability Standards Board (ISSB)
- Taskforce on Climate-related Financial Disclosures (TCFD)
- Taskforce on Nature-related Financial Disclosures (TNFD)
- Johannesburg Stock Exchange (JSE) Sustainability Disclosure
- JSE Debt and Specialist Securities Listings Requirements
- Sustainability Accounting Standards Board (SASB)
- Prioritised United Nations Sustainability Development Goals (SDGs)
- United Nations Global Compact (UNGC)
- Carbon Disclosure Project (CDP)
- Global Reporting Initiative (GRI) Standards
- Greenhouse Gas (GHG) Protocol
- Paris Agreement Climate Objectives
- Responsible Care® Programme
- Principles and Requirements of the International Integrated Reporting Framework <IR>
- King V™ Report on Corporate Governance for South Africa, 2025
- Broad-based Black Economic Empowerment (B-BBEE) Act
- Companies Act, 71 of 2008, as amended (Companies Act)

We seek to enhance our sustainability performance, responsibly manage our environmental footprint and contribute to global and local SDGs by voluntarily aligning our reporting with these frameworks.

Our alignment to global sustainability standards and frameworks

Introduction continued

Reporting boundary and scope

Our report addresses the financial and non-financial aspects of AECI Limited for the period from 1 January 2025 to 31 December 2025 and includes information relating to our operations and the functions over which we exercise control. We account for disposals or business changes until the last day of being incorporated in the Group.

Materiality determination

Double materiality

We have adopted a double materiality approach to identify and prioritise information on our economic value creation for the benefit of the investor community (inward-focused financial materiality) and its impact on society, communities and the environment (outward- focused impact materiality).

A matter is material if it can significantly affect our ability to create or preserve value over the short-, medium- and long-term. Our material matters are determined through our materiality determination process.

Refer to the *Shaping priorities together* section for more information

Forward-looking statements

Certain statements in our reports are forward-looking. By their nature, these statements and forecasts are inherently speculative and involve risk and uncertainty as they relate to future events and circumstances that may be beyond our control and may impact our performance and expectations. Readers are advised to use caution when interpreting these statements.

King V, which was published on 31 October 2025, is effective for financial years beginning on or after 1 January 2026. The Board has early adopted King V and applied its principles before the effective date, which demonstrates its commitment to leading governance practice. Areas were identified to strengthen implementation, with responsibility for driving and overseeing these actions allocated to the relevant Board committees. The committees will monitor progress and report regularly to the Board. The Board remains committed to progressively embedding the King V principles to strengthen governance across the Group.

Board approval

The Annual Report suite for the year ended 31 December 2025 is one of our primary channels of communication with stakeholders. It provides a balanced, transparent and integrated review of our financial performance and material sustainability matters during the year. The Board recognises its duty to oversee the integrity of the Group's integrated reporting. The Audit & Risk Committee supervised the preparation of the report and examined its content, processes and assurance, while other Board committees provided oversight of items within their respective mandates.

The Social, Ethics & Safety Committee (SESC²) recommended the report for approval and the Board reviewed it to ensure its integrity and balance. The Board is satisfied with the authenticity of the information used for internal decision making and believes that the report provides an accurate and balanced account of the Group's performance and prospects.

The Board approved the report on 21 April 2026.

Introduction continued

A journey of impact and recognition

A progressive journey of responsible value creation

From early commitments to responsible business conduct in the 1990s to today's governance, transparent reporting and science-aligned targets, our journey reflects a clear progression from intent to integration. Our progressive milestones demonstrate how sustainability is embedded in decision making, strengthening resilience, supporting our license to operate and enabling long-term value creation.

Introduction continued

Awards, recognition and thought leadership

In 2025, external awards, independent recognition and thought leadership commitments reflected a more mature, outcomes, driven ESG approach embedded in how the Group partners with communities, customers and broader society.

Recognition from industry and associations, beyond traditional sustainability accolades, affirms the credibility and impact of our practices.

Collectively, these acknowledgements reinforce our commitment to ethical leadership, inclusive development and long-term value creation, positioning the Group as a benchmark for responsible business.

2025 Awards

Top Employer South Africa 2026 (sixth consecutive year)

Excellence in people practices, including people strategy, employee experience, sustainability, learning and development, diversity, equity and inclusion (DEI) and employee wellbeing.

Beyond Sustainability Awards

Integrated ESG responsibility practices that deliver measurable community and societal outcomes.

Ecologic Awards

Leadership in responsible business practices with a strong social and environmental nexus.

Top Women Corporate Citizen Awards

Leadership and impact in advancing inclusive growth, gender equity and responsible corporate citizenship.

Logistics Achiever Awards

Excellence in supply chain performance, operational effectiveness and responsible value chain management.

Institute of Marketing Management (IMM) Superbrand Awards 2025 – Number One Brand in Malawi

Brand trust, market leadership and reliable agricultural solutions supporting farmers and national food security agriculture – agrochemical suppliers.

Messages from our Committee Chairs

Message from the Chairs of the Social, Ethics & Sustainability (SES) and the Environment, Health and Safety (EHS) Committees

Fikile Dlodlu (De Buck)
SESC¹ Chairman

Stephen Dawson
EHSC Chairman

Billy Mawasha
SESC² new Chairman

“Strong governance, disciplined sustainability and a culture rooted in care are the foundations on which AECI continues to build a responsible and enduring legacy.”

The Environment, Health & Safety Committee and the Social, Ethics & Sustainability Committee were combined in November 2025 to establish a new Social, Ethics & Safety Committee, under the Chairmanship of Billy Mawasha. As the previous structure applied for most of the year, this message discusses the former Committee activities during the year.

As we reflect on the year under review, we do so with a deep sense of pride and appreciation, not only for what has been achieved, but for the spirit in which it has been achieved. In a complex and fast changing operating environment, AECI has remained anchored in core fundamentals: strong governance, responsible leadership, safety, sustainability and social responsibility. These foundations position the Group to build a lasting legacy grounded in resilience and trust.

Safety remains our most fundamental responsibility. Guided by our Culture Code and strengthened through our **Beyond Zero** philosophy, we continue to shift from a rules based approach to one rooted in trust, shared ownership and care for one another. **Beyond Zero** is not an aspiration alone; it is a way of working that shapes

daily behaviours, leadership decisions and how we show up for our colleagues, customers and communities.

Over the past year, safety and sustainability have been further embedded into AECI’s governance architecture. The Board and its committees have strengthened oversight of climate related risks and opportunities, environmental performance, social impact and ethical conduct, ensuring alignment with emerging global standards such as IFRS S1 and IFRS S2 under the ISSB framework. Sustainability related risks are increasingly integrated into enterprise risk management (ERM), capital allocation decisions and remuneration structures, reinforcing accountability and linking ESG performance directly to enterprise value.

This enhanced governance framework ensures that sustainability is not treated as a standalone agenda, but as an integral component of strategic direction, risk appetite and long-term financial resilience. Through strengthened disclosure practices, improved data quality and clearer oversight mechanisms, we continue to enhance transparency and align with global expectations for decision useful sustainability reporting.

The principle of *Lived.Led.Shared*:

- **Lived through everyday behaviours and operational discipline**
- **Led through visible and accountable leadership**
- **Shared through consistent engagement, learning and mutual responsibility**

While we acknowledge that challenges remain, we are encouraged by the resilience of our teams and the tangible improvements achieved through disciplined execution, learning and proactive risk management. Looking ahead, the continued focus will be on deepening the lived experience of safety and sustainability, reinforcing leadership accountability and strengthening shared ownership to sustain a resilient **Beyond Zero** culture.

Beyond Zero is further advanced in a holistic sense, having also integrated our commitment to environmental stewardship and climate action. Our **Net Zero journey** reflects the establishment of a credible transition pathway anchored in a

disciplined, governance led approach to decarbonisation. Anchored in a 2022 baseline, which has been restated for 2025 and supported by structured oversight, our transition pathway is aligned to ISSB expectations and incorporates performance analysis, risk management and measurable targets. Decarbonisation is not pursued in isolation, it is integrated into operational efficiency, innovation, resilience planning and long-term competitiveness. In this way, climate action becomes both a responsibility and a strategic enabler.

From improved resource efficiency and waste management to strengthened oversight of water and biodiversity impacts, we have reinforced environmental governance across operations. These actions are not undertaken for compliance alone, but to safeguard natural capital and protect the ecosystems on which our business and communities depend.

Introduction continued

Equally important is our ongoing commitment to social responsibility, not simply as philanthropy, but as a deliberate strategy to empower communities and create enduring value. During the year, we continued to refine our approach, shifting from inputs to measurable outcomes and from once-off interventions to scalable, partnership driven programmes. Our focus is on building capacity, strengthening local enterprise, advancing education and supporting health initiatives in ways that leave communities stronger and more self-sustaining over time.

Read more on this on pages 65 to 80 of this report

Scaling social responsibility requires governance, accountability and partnership. By aligning community investments to clearly defined objectives, monitoring outcomes and integrating social impact into broader sustainability oversight, AECI is reinforcing its license to operate while contributing meaningfully to inclusive growth.

Our ambition is not only to support communities, but to empower them creating a legacy of resilience, opportunity and shared prosperity.

Across all these areas – safety, ethics, social impact, environmental stewardship and climate action – we have seen growing maturity in governance and accountability. Sustainability and EHS related risks and opportunities are increasingly embedded in ERM, remuneration frameworks and strategic decision making. This integration strengthens resilience and ensures that responsibility remains central to performance.

None of this progress would have been possible without the dedication and professionalism of our management teams, employees and partners. Across diverse operations and challenging contexts, they have demonstrated that responsible leadership and disciplined execution can coexist with ambition and growth. This collective commitment to living our values with integrity, care and accountability is the true strength of AECI.

As this chapter draws to a close for us as outgoing Chairs, we do so with confidence in the foundations that have been laid and optimism for what lies ahead. We are pleased to introduce Billy Mawasha, the new Chair of the combined Social, Ethics & Safety Committee, who will lead this integrated mandate forward. The consolidation of social, ethics, sustainability and safety under a unified committee reflects the maturity of AECI's governance model and reinforces the interconnected nature of culture, sustainability performance and risk oversight. We are confident that under Billy's leadership, the Group will continue to deepen its alignment with global standards, strengthen accountability and scale its positive impact.

It has been a privilege to serve as Chairs of the two committees during a period in which reinforcing fundamentals has proven to be a powerful source of strength. We hand over the baton to Billy with immense pride in what has been achieved, sincere appreciation for the commitment shown across the organisation and strong confidence in AECI's ability to continue advancing a future that is safe, responsible and sustainable for people, planet and prosperity.

As we conclude our tenure, we do so assured that the governance foundations are firm, the sustainability direction is clear and the culture of accountability and care that defines AECI will continue to shape a lasting and responsible legacy.

Fikile Dlodlu (De Buck)

Introduction continued

A message from our Interim Group Chief Executive Officer and Group Chief Financial Officer

Dean Murray
Interim Group Chief Executive Officer

Ian Kramer
Group Chief Financial Officer

“Safety and Sustainability at AECI are not separate from performance. They are how we strengthen resilience, protect trust and position the Group to manage risk and deliver enduring measurable value.”

Leveraging our foundations and strengths for value focused delivery

2025 marks another year of disciplined execution and strengthened foundations across AECI. In an evolving operating environment, our focus has remained clear: reinforce governance, embed safety and sustainability into decision making and deliver measurable progress that supports long-term value creation.

Sustainability at AECI is not a parallel agenda. It is embedded into how we govern, allocate capital, manage risk and create enduring value. It underpins our license to operate, strengthens resilience and supports stakeholder confidence.

Safety and culture

Safety remains our most immediate responsibility to our people and we are very pleased to report that the Group recorded zero fatalities during the reporting period. This outcome reflects the collective vigilance, leadership commitment and operational discipline across our businesses.

We are encouraged by the continued improvement in overall safety performance, with the TRIR improving **by 35%, from 0.31 in 2024 to 0.20 in 2025**. This progress demonstrates the impact of strengthened leadership engagement, enhanced leading indicator focus and reinforced accountability at site level.

While occupational safety indicators improved, process safety performance deteriorated, with the PSTIR increasing **from 0.64 in 2024 to 0.81 in 2025**. Given the inherent risks within our mining and chemical operations, this movement is taken seriously. In response,

we have intensified oversight, strengthened barrier management, enhanced incident learning processes and reinforced accountability at both operational and executive levels.

Through the continued activation of **Beyond Zero**, we have reinforced that safety is lived through behaviour, led through visible leadership and shared across every site and shift. Our transition from a compliance focused approach to one centred on a culture of ownership and care continues to gain traction, supported by critical control verification and visible felt leadership.

A high performance organisation cannot exist without both physical and process safety discipline. The divergence between occupational and process safety indicators reinforces the need for continued vigilance and systemic focus. Our commitment remains clear: zero harm, strengthened process safety governance and continuous improvement supported by disciplined oversight.

Governance and disciplined execution

During the year, we continued to deepen the integration of sustainability within our governance architecture. Progressive alignment with IFRS S1 and IFRS S2 has strengthened the connection between sustainability related risks and ERM. Climate, water, environmental and social risks are increasingly reflected in risk registers, capital planning decisions and Board oversight processes.

This integration ensures that sustainability considerations influence real decisions from investment approvals to remuneration structures reinforcing accountability and transparency. Our SLFF further connects defined ESG metrics, namely carbon, water and gender equality, to financial discipline and performance outcomes.

Climate action and environmental stewardship

Our Net Zero by 2050 commitment is supported by a governance led transition pathway, building from our 2022 baseline and a restated 2025 baseline. This has been extended through refreshed 2030 targets. During the year, we progressed reductions of our Scope 1 and Scope 2 emissions trajectory through energy efficiency initiatives, renewable electricity implementation and operational optimisation.

We are pleased to report a **12% year-on-year reduction** in the Group’s absolute carbon footprint, comprising Scope 1 and Scope 2 emissions. This improvement reflects targeted decarbonisation initiatives, tighter energy management and disciplined operational execution across our businesses. Progress against our baseline demonstrates that emissions reduction is increasingly embedded in operational planning rather than treated as a standalone initiative.

To date, we have been using absolute values to demonstrate the performance of our environmental indicators which reflect the total environmental or social impact of our operations. In alignment with our SLFF, we are now incorporating intensity metrics, which measure performance relative to production volumes, to assess improvements in efficiency over time.

Climate considerations will continue to be integrated within capital allocation processes, ensuring that major investments are evaluated for resilience, carbon impact and long-term viability. This structured approach aligns with our IFRS S2 commitments and strengthens our ability to manage both transition and physical climate risks.

Introduction continued

Water stewardship remains a material priority, particularly in water stressed regions. Enhanced monitoring, recycling initiatives and infrastructure improvements support reduction targets and strengthen operational resilience. Environmental responsibility also extends to land remediation and structured rehabilitation programmes, with provisions assessed rigorously and incorporated into long-term financial planning.

Together, these actions demonstrate that environmental stewardship is integral to responsible value creation and long-term competitiveness.

Social responsibility and inclusive growth

Beyond operational performance, our approach is grounded in social responsibility and community empowerment. We continue to refine our programmes to focus on scalable, partnership driven initiatives that build capability and leave communities stronger and more self-sustaining over time.

Progress toward our 2030 gender equality targets continues, supported by leadership development, succession planning and inclusive talent management. Empowering people within our organisation and in the communities where we operate remains central to sustainable performance.

A balanced view of performance

Not every metric improved during the year. Portfolio optimisation, production variability and operational constraints influenced certain outcomes. We present our performance transparently, recognising that sustainability maturity is defined not by uninterrupted improvement, but by disciplined response, corrective action and governance oversight.

Where performance gaps exist, structured action plans are in place and monitored through established governance mechanisms.

Our refreshed 2030 targets reflect ambition grounded in operational feasibility. Over the next five years, our focus will remain on:

- Delivering measurable reductions in Scope 1 and Scope 2 emissions
- Addressing Scope 3 emissions and setting reduction targets
- Optimising renewable electricity adoption
- Improving environmental performance, water efficiency and effluent management
- Strengthening process safety
- Scaling social responsibility initiatives for sustainable community impact
- Enhancing decision useful disclosures aligned to global standards

Through disciplined governance, accountable leadership and a culture that is Lived.Led.Shared we continue building a business that is safe, responsible and sustainable creating lasting value for our stakeholders and future generations.

Independent non-executive director

South African
BSc Electrical Engineering

*Appointed to the Board
in 2025*

Value to the Board:

Mining and engineering leadership experience in complex operating environments, with practical insight into performance, safety, execution discipline and value creation.

(SES) (REM)

Patty Mishic O'Brien

(60)

Independent non-executive director

American
BSBA (Industrial
Marketing), MBA

*Appointed to the Board
in 2021*

Value to the Board:

Broad commercial, innovation and sustainability expertise, supporting the Group's focus on customer relevance, ESG performance and long-term value creation.

(AR) (SES)

Nombulelo Moholi

(66)

Independent non-executive director

South African
BSc (Electrical and
Electronics Engineering),
Stanford Executive
Program

Appointed to the Board in 2024

Value to the Board:

Entrenched leadership, ICT and governance experience, with valuable insight into strategy and risk oversight at listed company level.

(SI) (AR)

July Ndlovu

(60)

Independent non-executive director

South African
BSc (Metallurgical
Engineering), MBL

*Appointed to the Board
in 2025*

Value to the Board:

Global mining leadership experience, with a strong emphasis on safety and operational excellence, contributing industry insight to the Board's deliberations on long-term performance.

(REM) (SI) (NOM)

Marna Roets

(59)

Independent non-executive director

South African
BCom (Hons) Accountancy,
CA (SA)

*Appointed to the Board
in 2020*

Value to the Board:

Extensive financial services, banking and IT expertise, supporting disciplined oversight of reporting, risk, governance, capital allocation and resilience

(AR) (REM) (NOM)

Introduction continued

Dean Murray
(56)

Interim Chief Executive Officer

National Diploma in Chemical Engineering
Global Executive Development Programme, Gordon Institute of Business Science (GIBS)

Value to the Board:

Strong institutional knowledge, deep chemicals-sector experience and decades of operational leadership at AECI, reinforcing the Board's focus on operational performance, execution and value creation.

Ian Kramer
(55)

Group Chief Financial Officer

BCom (Hons) Accountancy, CA(SA)

Appointed to the Board in 2025

Value to the Board:

Strong financial leadership in strategy, capital management and risk oversight, supporting the Board's focus on responsible growth and financial resilience.

A diverse Board

The Board has a mix of skills, experience and perspectives aligned with our strategy, risk profile and long-term objectives. Its expertise covers strategic and capital oversight, sector knowledge and operational, safety and risk leadership. These capabilities support our safety-critical, regulated and capital-intensive operations.

All Non-Executive Directors (NEDs) are independent, ensuring objective oversight.

Introduction continued

Sustainability governance

Governance of sustainability related risks and opportunities follow the IFRS S1 four pillar logic of governance, strategy, risk management and metrics and targets. The Board retains ultimate accountability for strategy, risk and performance, supported by its committees.

The **Audit & Risk Committee** oversees the ERM framework, including ESG related risks such as climate, safety and cyber and monitors risk appetite and key risk indicators

The **Social, Ethics & Safety Committee** (previously two committees namely, SESC¹ and EHSC) primarily focusses on:

- Sustainability strategy, material ESG topics, stakeholder impacts and progress against ESG targets
- ESG risk and opportunities
- Process safety, occupational health and safety, environmental compliance and major incident prevention across AECI's operations

Management accountability is structured through Group functions and business units. ESG topics are incorporated into the combined assurance framework, ensuring that cross functional teams including Group functions such as Internal Audit, Compliance, Sustainability, ESG, EHS, IT, Tax, Treasury and external assurance providers, work together to keep key risks within Board approved appetite and to strengthen the underlying control environment.

The combined assurance committee meets quarterly and reports into the relevant Board committee.

Our risk culture is shifting from a primarily compliance driven model to a more proactive, embedded way of working. Recent culture surveys included questions on how frequently employees consider risk when executing transactions and making operational decisions.

Early results are positive and are being used as evidence that risk awareness is improving across the Group.

Overall, the period from 2024 to 2025 marks a visible transition. The foundations of ERM have been put in place, risk appetite has been defined, ESG indicators are built into dashboards and incentives and the Group is beginning to see the benefits of a more mature, integrated risk culture.

Building on strong foundations

2025 Highlights

	People and culture	Portfolio and operations	Sustainability in decision making	Financial discipline and resilience	Customer and stakeholder value	Transparency and governance
Key aspects	Culture Code and Beyond Zero campaign activated as a renewed commitment to the fundamentals of safety, leadership and care.	Portfolio shift advanced through implementing near-to-customer models, improving safety, reliability, efficiency and customer value while reducing logistics risk.	Sustainability and safety drivers refreshed and embedded into strategy, risk management, capital allocation and performance tracking.	Disciplined capital allocation applied to Mining and Chemicals businesses, aligning investment in innovation and technology with sustainability priorities.	Customer collaboration and partnerships strengthened, supporting ESG outcomes, operational efficiencies and long-term trust across value chains.	Enhanced ESG data, disclosure and governance alignment with IFRS S1 and S2, strengthening decision useful reporting and stakeholder confidence.

SDGs

Building on strong foundations continued

Group strategy: Focus areas

From aspiration to material portfolio shifts: Connecting people, portfolio and performance on the path to a safe and sustainable business.

Our values in action

The focus areas are delivered through our values in action. They provide the purpose, behavioral and cultural foundation for the delivery of our strategy.

Driving sustainable value through six drivers

In 2025, we refreshed our safety and sustainability drivers to better reflect how value is created and preserved across the Group. These drivers enable long term value creation in our business strategy. They link our strategic pillars, safety and sustainability focus areas and Culture Code to the outcomes we deliver for people, planet and performance and they help ensure that our strategy translates into measurable progress.

The drivers build on our historical focus on safety, environmental stewardship, business optimisation and social responsibility and extend it by bringing climate action, transparency, disclosure, governance and leadership clearly into the centre of value creation. They provide a consistent lens through which we plan, execute and report on our strategy, including how we apply double materiality to risks, opportunities, capital allocation and partnerships.

These drivers position the Group as a trusted and resilient partner that can attract capital, secure customers and strengthen our license to operate in existing and future markets.

Safety and workforce wellbeing

Ensuring every person goes home safe and is supported physically, mentally and emotionally.

Empowered communities

Creating shared value and meaningful partnerships in the communities in which we operate.

Climate resilience

Strengthening our ability to adapt to climate risks while reducing our carbon footprint and progressing towards Net Zero by 2050.

Environmental stewardship

Minimising environmental impact, while responsibly managing resources and protecting ecosystems.

Responsible growth

Pursuing sustainable value creation that balances operational performance with long-term accountability.

Ethical leadership

Embedding integrity, transparency and sound governance in every decision we make, ensuring ethics driven values.

Building on strong foundations continued

Our purpose

We are One AECI, for a Better World

Key strategic areas

Leverage AECI's strengths

Prioritise business resilience

Pursue improved quality of earnings

Evolving our strategy

Following our Group strategic review, in 2025 we evolved from a phase focused on portfolio optimisation towards disciplined growth and operational resilience.

Our strategy is expressed through three strategic focus areas: leveraging our strengths, prioritising business resilience and pursuing improved quality of earnings.

Through our portfolio shift and focus on customer value, we continue to integrate sustainability and innovation into the core of our strategy.

Read more in our IR pages 10 to 11

Through our portfolio shift and focus on customer value, we continue to integrate sustainability and innovation into the core of our strategy. The 2024 to 2026 period is an aspirational journey driven to the realisation of our purpose of We are One AECI, for a Better World and is expressed through three sustainability focus areas that connect people, portfolio and performance.

Strategic pillars driving sustainable change

Foundations

Doing the same things better

Operational excellence and compliance

Focus on reducing harm to people, process and planet

Incremental improvements to business as usual

Portfolio shift and customer value

Doing good by doing new things

Beyond Zero campaign and the AECI Culture Code driving a high performance, safety focused workforce

Near to customer models reducing logistics risk, emissions and cost

Customer collaboration and green chemistry improving beneficiation, yield and resource efficiency

Disciplined capital allocation into pilots and scalable innovations internationally

We are here

Safe and sustainable business

Doing good with strategic partners

Integrated business model where sustainability and innovation are fully embedded in strategy and capital allocation

Shared value for people, planet and prosperity across the value chain

Extending commitment beyond AECI through partnerships that support climate, water and circularity outcomes in key markets

Building on strong foundations continued

SDG outcomes

Our safety and sustainability drivers set out how we manage safety, climate, innovation, communities, transparency and governance in practice. Our priority SDG framework reflects the outcomes of these efforts, showing how these drivers translate into impact across social responsibility, environmental stewardship, responsible growth and ethical leadership.

From strategy to value creation and our 2030 targets

To translate our sustainability strategy into measurable outcomes, we have restated our baseline for 2025 together with which we have established 2030 ESG targets. These are aligned with our Net Zero by 2050 commitment and SLFF. These targets focus on the environmental and social indicators most material to our operations and long-term resilience.

The 2030 targets provide a clear pathway to translate strategy into measurable performance, enabling the Group to track progress towards Net Zero while supporting responsible growth.

Read more in Our pathway to decarbonisation section pages 54 to 64

Building on strong foundations continued

Creating sustainable value

We create value for our stakeholders by living the Culture Code and advancing our **Beyond Zero** ambition in everything we do. We commit to be people focused, champion diversity and inclusion, protect the environment, operate responsibly, support communities, act with integrity and report transparently. These commitments guide how we build trusted relationships with stakeholders and balance risk, return and impact across the Group.

Each stakeholder interaction becomes part of our journey toward a safe and sustainable business. Our Culture Code and **Beyond Zero** philosophy are embedded into the way we operate, translating strategic intent into practical commitments and measurable outcomes.

* Efficiency measured per tonne produced

Building on strong foundations continued

Creating, preserving and sustaining value

At AECI, value extends beyond financial returns to the safety and capability of our people, strong relationships, differentiated innovation and responsible resource use.

Our purpose, **We are One AECI**, for a Better World and our safety and sustainability ambition to protect what matters most, guide how we create, preserve and sustain value for all stakeholders. By focusing on optimising our operational businesses, we align growth with sustainable outcomes and disciplined capital allocation.

Our value creation model is based on the integration of the six capitals into business strategy to support the trust compact that underpins our license to operate. It is informed by the <IR> and aligned with IFRS S1 and IFRS S2, which emphasise connectivity, governance, resilience and reliable sustainability information.

Value erosion

We protect enduring value by anticipating and managing risks related to climate change, regulation, geopolitical developments, technology shifts and resource constraints. ESG risks are integrated into strategic and operational decision making. During the year, this included advancing emission reduction and energy transition projects, targeted water stewardship in stressed catchments, enhanced cybersecurity and continued engagement with communities, regulators and investors.

These responses help us to avoid value erosion, safeguard our reputation and position the Group for future growth.

Value preservation

In 2025, we focused on upholding ESG commitments, embedding the sustainability drivers and maintaining operational and financial discipline. This included reinforcing safety and process safety systems, strengthening governance and assurance, improved data and disclosure and built more resilient supply chains.

These actions helped to stabilise performance in a volatile market, supported reductions in incidents, improved resource efficiency and preserved the integrity of our long term commitments.

Value creation

In 2025, we continued to create value by delivering responsible mining and chemical solutions. Our focus on safer workplaces, stronger leadership accountability and sustainability initiatives, improved community outcomes and trust with customers and regulators, contributed to sustainable revenue growth.

This has strengthened talent and capability, improved resilience of assets, fostered innovation and strong relationships with stakeholders.

Building on strong foundations continued

Capital	Inputs and enablers	What we do	Outcomes in 2025	Long-term impact
Human capital 	A well defined culture code focused on leadership commitment to Beyond Zero where safety and sustainability are Lived.Led.Shared.	Build a high performance culture through visible leadership, critical control discipline and future skills; strengthen DEI and physical, mental and social wellbeing.	Safer workplaces; stronger leadership accountability; improved capability, retention and engagement; better collaboration across teams.	Engaged, future ready workforce; resilient leadership; adaptability to technology and market shifts; culture that supports sustainable performance.
Social and relationship capital 	Fostering trust and engagement with stakeholders, social investment, enterprise and supplier development, ethics and compliance frameworks.	Engage proactively with communities and customers; co-design solutions; invest through social responsibility and enterprise development; uphold ethical conduct and respond to concerns.	Stronger community relationships; deeper customer partnerships; improved trust; reduced social and reputational risk.	Durable licence to operate and grow; shared value with communities and partners; stronger support during periods of disruption and change.
Natural capital 	Access to water; land and biodiversity; energy supply; permits, environmental management systems; climate and nature strategies; pollution controls.	Manage emissions, energy, water, waste and effluent responsibly; implement land remediation strategies; improve resource efficiency in plants and logistics; develop greener chemistry and circular solutions; protect ecosystems and anticipate regulation.	Reduced environmental incidents; improved land remediation support; improved understanding of climate and nature risks; early progress on decarbonisation and water stewardship; stronger alignment with customer and regulatory expectations.	Progress toward Net Zero by 2050 and nature positive outcomes encompassing land remediation; lower exposure to carbon, water and compliance costs; resilient operations in stressed regions.
Financial capital 	Cash generated from operations; access to debt and equity; SLFF; disciplined capital allocation framework, risk appetite and return thresholds.	Maintain balance sheet strength; invest in customer support and solutions; innovation; safety and efficiency; balance growth and maintenance; link funding to sustainability priorities.	Sustained investment in strategic projects; improved cost and efficiency profiles; maintained or enhanced credit quality; increased flexibility to fund transition projects; international growth.	Stronger financial resilience; improved capital efficiency; ability to fund long-term climate and technology shifts; investor and lender confidence in our ESG risk management.
Manufactured capital 	Production sites, warehouses; laboratories; logistics fleets; IT and operational technologies (OT) systems; process safety, maintenance programmes, engineering expertise.	Modernise and maintain plants and equipment; strengthen process safety and asset integrity; optimise logistics and warehousing; digitise key processes to improve reliability.	More reliable operations with fewer unplanned stoppages; safer plants and processes; reduced logistics risk and cost; improved product quality, service and resource efficiency.	Flexible, efficient and safe asset base; growth enabled by new technologies; circular solutions; reduced total cost of ownership; customer confidence in AECI.
Intellectual capital 	Technical and research and development (R&D) capabilities; proprietary formulations, patents and licenses; data and digital tools; operational and customer insights.	Develop and scale green chemistry and circularity solutions; refine formulations for better yield and lower impact; use data to optimise processes and decision making; share knowledge across the Group.	Value proposition that supports customer ESG goals; efficiency gains in production and application; stronger differentiation in key markets; better insights into risks and opportunities.	Continuously evolving portfolio aligned with customer and regulatory expectations; sustained competitive advantage; readiness for low carbon and circular value chains.

We will prioritise opportunities that deliver commercial value and measurable sustainability outcomes. Our next phase will focus on potential solutions that reduce Scope 3 emissions, minimise safety risks and handling costs and accelerate the adoption of safer, more efficient technologies. Our R&D efforts will continue to advance product formulations, improve mineral beneficiation and increase yield, ensuring our solutions remain effective, responsible and cost competitive.

Over time, we aim to evolve into a safe and sustainable business that delivers positive impact through strategic partnerships. By embedding sustainability and innovation into strategy, capital allocation and decision making, we will create shared value for people, planet and prosperity across our value chain.

Shaping priorities together

2025 Highlights

	External operating context	Resource and transition pressures	Materiality and prioritisation	Strategic integration	Key trade-offs	Risks and opportunities	ERM and governance	Enablement
Key aspects	Incorporated and accelerated sustainability regulation to shape operating costs, market access, assurance expectations and long-term resource availability.	Energy reliability and water availability remain critical operational considerations, reinforcing the focus on efficiency, resilience and informed planning assumptions.	Double materiality approach strengthened, applying impact (inside-out) and financial (outside-in) perspectives to prioritise ESG matters linked to value creation, risk management and stakeholder confidence.	Material matters grouped into four focus areas (strategic priorities, resilience enablers, operational dependencies and horizon scanning), ensuring sustainability priorities are both strategically anchored and operationally actionable.	Identified trade-offs between carbon reduction and production growth, renewable energy uptake and capital constraints. DEI targets and talent availability. Process safety and innovation speed, informing pragmatic mitigation strategies.	Climate, safety, supply chain, cyber and regulatory risks and organisational culture and talent remain top Group risks, while opportunities exist to differentiate through innovation, customer partnerships and sustainable finance.	ESG risks embedded into ERM, with defined risk appetite, tolerance thresholds and escalation mechanisms, aligned to IFRS S1 and IFRS S2 and overseen by Board committees.	Sustainability considerations are increasingly embedded into planning, capital allocation and operational decision making, supporting resilience, market access and long-term value creation.
Capitals								

SDGs

Shaping priorities together continued

Sustainability regulatory context

The Group operates in an environment shaped by geopolitical uncertainty, evolving trade dynamics and accelerating sustainability regulation across key markets. Climate and nature considerations are increasingly embedded in policy frameworks, trade requirements and capital allocation decisions, with implications for operating costs, market access, data and assurance expectations and long-term resource availability.

Across key markets, sustainability regulation is converging around stronger governance, transparent emissions data and assurance ready disclosures, with impacts extending well beyond entities directly regulated.

Europe: an integrated policy landscape including the Corporate Sustainability Reporting Directive (CSRD), European Sustainability Reporting Standards (ESRS) and the Carbon Border Adjustment Mechanism (CBAM) is raising expectations for double materiality, product level emissions transparency and verifiable sustainability information, shaping customer procurement requirements and access to capital across global value chains.

South Africa: the Climate Change Act and the evolving carbon tax framework are reinforcing the importance of operational efficiency, credible emissions abatement and defensible planning assumptions, alongside increasing biodiversity and nature related scrutiny.

United States: expectations are rising through a combination of regulatory developments such as the Securities and Exchange Commission climate disclosure rules, federal and state regulations and strong investor and customer pressure for consistent, decision useful sustainability disclosures.

China: policy instruments including the national Emissions Trading System (ETS) and mandatory environmental reporting are strengthening emissions management and data discipline in line with national decarbonisation goals.

Indonesia: emerging carbon pricing mechanisms and biodiversity and forestry regulations are increasing focus on land use change, deforestation risk and emissions performance.

These efforts are designed to support market access, manage cost and resource constraints, respond effectively to regulatory and customer expectations and position AECI to navigate transition risks and opportunities in a structured and value focused manner.

Australia: the introduction of the Australian Sustainability Reporting Standards (ASRS) and mandated climate disclosures are embedding climate related reporting into mainstream financial cycles. These reforms raise expectations for board oversight, scenario analysis, transition planning, internal controls over non financial data and assurance readiness. Requirements under the National Greenhouse and Energy Reporting Act and the Safeguard Mechanism further reinforce the need for accurate emissions accounting and credible decarbonisation pathways.

Zambia: sustainability reporting expectations are advancing through adoption initiatives led by the Zambia Institute of Chartered Accountants (ZICA), as well as the Lusaka Stock Exchange's compulsory ESG disclosure framework for listed entities. Together with the Environmental Management Act, administered by the Zambia Environmental Management Agency (ZEMA), these developments strengthen expectations for environmental compliance, responsible resource stewardship and transparent sustainability performance.

Together, these developments highlight a global shift toward credible, comparable and assurance ready sustainability information, elevating the strategic importance of strong governance, consistent methodologies and proactive transition planning to support resilience and market access. Energy reliability and water availability remain critical considerations within the African operating environment.

In response to this operating context, we are advancing the governance, systems and operational disciplines that underpin resilience, efficiency and credible sustainability performance. The Group's focus is on embedding sustainability considerations into planning, capital allocation and operational decision making, while enhancing the quality, consistency and assurance readiness of sustainability information.

We are aligned with the principles of the UNGC, integrating its ten principles on human rights, labour, environment and anti-corruption into our policies, practices and decision making. Through this commitment, we aim to operate responsibly, support sustainable development and create long-term value for our stakeholders.

AECI Mining, Modderfontein site, South Africa

Shaping priorities together continued

Stakeholder engagement and insights

We engage continuously with stakeholders who influence, or are affected by, our operations, strategy and long-term performance.

Through structured dialogue guided by the Stakeholder Management Framework, we seek to understand stakeholder expectations, identify emerging risks and opportunities and strengthen relationships that support sustainable value creation.

Engagement during 2025 provided insights into evolving expectations around safety and sustainability culture, operational resilience, sustainability performance and inclusive economic development. These perspectives help inform decision making across the Group and support the integration of sustainability priorities into our strategy and operations.

Stakeholder	What matters	Stakeholder insights	Our response	Capitals
Employees	A safe, inclusive workplace and culture with visible leadership, clear communication and opportunities for development remains central to the employee experience.	- Strong engagement regarding culture transformation and Beyond Zero safety and sustainability journey - Greater expectation for leadership visibility and open communication - Increased focus on wellbeing and psychological safety - Continued demand for skills development and career growth	We are embedding the Beyond Zero programme to strengthen a safety and sustainability culture that is Lived.Led.Shared leadership engagement has increased and investment in development, skills and wellbeing programmes continues to support a high performance culture.	
Customers	Customers rely on the Group to deliver safe, reliable and innovative solutions that improve productivity and support sustainability goals.	- Growing demand for solutions that improve efficiency and reduce environmental impact - Increased collaboration on product innovation and operational performance - Continued emphasis on reliability of supply and safety performance - Stronger interest in long-term strategic partnerships	We continue to invest in innovation, technical expertise and customer partnerships that enhance productivity and safety. Sustainability considerations are increasingly integrated into product development and operational collaboration.	
Shareholders, investors, analysts and lenders	Investors prioritise disciplined capital allocation, earnings quality and transparent ESG disclosure.	- Continued focus on portfolio optimisation and earnings quality - Increasing attention on climate transition risks and our Net Zero Pathway - Rising expectations for transparent sustainability disclosures - Value placed on consistent engagement and strategy clarity	We continue to enhance sustainability disclosures and maintain transparent dialogue with investors, supporting a shared understanding of strategy execution and long-term value creation.	
Communities	Communities expect responsible operations that contribute to economic development while protecting environmental resources and wellbeing.	- Continued emphasis on education and youth employment opportunities - Importance of transparent communication about operations - Interest in community development that supports sustainable livelihoods	We invest in community programmes focused on education, skills development and economic participation. Engagement platforms support transparent dialogue with local stakeholders.	
Suppliers	Suppliers play a key role in reliable operations, ethical sourcing and resilient supply chains.	- Global supply volatility highlights the importance of diversified sourcing - Increasing expectation for ESG alignment across supply chains - Opportunities to strengthen localisation and supplier development	We strengthen supplier governance, diversify sourcing and support enterprise and supplier development initiatives to build resilient supply chains.	
Governments, industry forums and regulators	Regulators expect responsible operations that comply with legislation while supporting sustainable industrial development.	- Continued focus on environmental compliance and safety standards - Increasing regulatory attention on sustainability performance - Ongoing engagement on responsible industry practices	We maintain active engagement with regulators and industry bodies to ensure compliance and support responsible industrial development.	
Trade unions	Constructive labour relations, safe workplaces and fair employment practices remain priorities.	- Continued emphasis on employee safety and wellbeing - Engagement around organisational transformation and workforce stability - Importance of open dialogue between labour and management	We ensure constructive engagement with trade unions through established consultation processes, supporting safe workplaces and fair labour practices.	
Media	Timely, transparent communication and access to accurate information on company activities and sustainability commitments.	- Expect clear and timely updates on company developments - Growing interest in sustainability performance and impact - Need quick responses and reliable information	Provide regular updates through press releases and briefings. Share transparent information on performance and sustainability. Ensure timely responses to media inquiries.	

Shaping priorities together continued

Materiality mapping

Our materiality process guides the identification, management and reporting on sustainability matters that most influence our long-term value creation and where we have the most significant impacts on society and the environment.

In 2024, we initiated a double materiality assessment, reinforcing our commitment to transparent disclosure and alignment with evolving sustainability priorities and best practice. In 2025, we deepened this work through internal diagnostic workshops, bolstering the link between material matters, ERM and ESG targets.

Over the past three years, we have advanced our materiality process, moving from leadership prioritisation to double materiality and strategic integration. This progress strengthens how we connect material matters to strategy, risk management, capital allocation and performance.

To support consistent decision making and clearer reporting boundaries, material matters were grouped into four focus areas aligned to our ESG targets and ERM.

Materiality focus area	Interpretation	Sustainability priorities
Strategic priorities M1	Board level sustainability priorities central to value creation inclusive of strategic targets and our Net Zero strategy.	- Climate change - Energy transition - DEI - Innovation
Resilience enablers M2	Business agility to respond to changing environment and conditions around us. Support stakeholder trust, innovation and long-term competitiveness. Driving ecosystem innovation.	
Operational dependencies M3	Affect business continuity, regulatory compliance, maintaining our social license to operate and stakeholder trust and confidence.	- Ethical business - Waste management - Regulatory compliance - Human rights
Horizon scanning M4	Consistent monitoring and evaluation of the impact of stakeholder, environmental and regulatory expectations.	

Shaping priorities together continued

Materiality focus area	Sustainability matters	Impact materiality	Financial materiality

KEY

- **Extreme:** highlights issues with a direct and measurable influence on enterprise value, which affects our transformation targets, license to operate and market competitiveness
- **High:** represent strong risk and opportunity levers for resilience and innovation
- **Moderate:** these topics remain closely monitored as stakeholder expectations and policy frameworks evolve

Shaping priorities together continued

Trade-off analysis

In 2025, we identified several trade-offs between sustainability targets and the operational realities of the Group. These trade-offs illustrate the complex balance between environmental priorities, social inclusion and financial performance.

By understanding these tensions, we can ensure that sustainability progress does not compromise competitiveness, operational continuity, or stakeholder value. The following table summarises key trade-off areas, the data supporting each, their implications and our strategic responses or mitigation action.

Balancing ESG aspiration with operational realities

Trade-off area	Performance	Diagnosis and implication	Strategic response / mitigation
1 Carbon reduction vs. production growth 	Scope 1 and 2 emissions reduced from 2022 baseline of 494k tCO ₂ e to 366k tCO ₂ e for 2025.	As production output rises, emission efficiency must improve to offset volume related increases. This creates tension between operational expansion and our Net Zero by 2050 commitment	- Introduce energy efficiency per tonne of production as a KPI - Invest in process optimisation and renewable energy - Improve efficiencies in fleet assets across upstream/downstream operations - Explore long-term Scope 3 reduction through abatement technologies
2 Renewable energy uptake vs. capital expenditure constraints 	92% increase in renewable electricity in 2025.	- The transition to renewable sources requires upfront capital and grid access for South Africa and African countries - In other international jurisdictions the transition from grid to renewables is the main consideration	- Expand on the applicability of SLFF to fund renewable installations - Explore Power Purchase Agreement (PPA) models to de-risk capex - Consider wheeling options
3 Diversity targets vs. talent availability 	Female representation at top, senior, middle management increased to 30% in 2025 up from 29% in 2024.	- Technical and site based roles often lack gender balanced candidate pipelines, creating recruitment bottlenecks that could delay target achievement - The turnover rate for employees at senior and middle management levels is high resulting in lack of retention of female employees - Limited inclusivity and insufficient cultural diversity within the organisation - Mergers and acquisitions (M&A) and divestment resulting in change of female representation	- Strengthen partnerships with Science, Technology, Engineering and Mathematics (STEM) development programmes and technical academies to expand female talent pipelines - Enhance bursary and graduate programmes to accelerate gender transformation - Focused training on inclusive leadership and unconscious bias - Robust Talent management programmes to drive gender mainstreaming - Women in operations programme to accelerate the growth of female representation in operations - Advancing women in our leadership development programme
4 Process Safety vs. innovation speed 	Deterioration of PSTIR to 0.81 in 2025 against 0.64 (2024).	More stringent safety requirements may extend commissioning times for new products and technologies, impacting innovation cycles	- Integrate process safety governance early in R&D and innovation workflows to ensure safe yet agile product development - Improved oversight and enforcement of statutory inspections - Focus on preventative maintenance to ensure plant and process integrity - Process safety critical equipment closely monitored and aligned to critical controls
5 Energy use vs. cost efficiency 	Total energy consumption decreased to 2.71m GJ in 2025 against 3.22m GJ (2024).	- Reduced confidence in infrastructure and grid stability largely in South Africa and African countries - Rising per unit cost of energy, expensive but unreliable - Increased reliance on high emission intensive alternatives, such as diesel and coal	- Adopt the principles of ISO 50001 to drive continuous efficiency improvements - Prioritise operational controls and monitoring, while integrating renewable energy solutions as part of our long-term Net Zero strategy and energy resilience pathway

Shaping priorities together continued

Risk appetite, thresholds and escalation

Risk overview

2025 top ten Group risks at a glance

Our ERM Framework identifies and prioritises the Group's principal risks based on their potential impact and likelihood.

The Group's top 10 risks reflect the key exposures that may affect operational performance, financial outcomes and long-term value creation.

Key sustainability risks within the Group risk matrix

Several of these risks have a strong sustainability dimension and are therefore highlighted in this Sustainability Report. These include health and safety, ESG, cyber security, supply chain and organisational culture and talent. These risks are prioritised due to their potential impact on regulatory compliance, stakeholder trust, operational resilience and sustainable business performance.

#	Risk	Residual risk	Target risk	Movement
1	Supply chain	High	Medium	Escalated
2	Governance process controls	High	Medium	Stabilising
3	Asset operational reliability	High	Medium	Reframed
4	IT capability and infrastructure	High	Medium	Improving
5	Cyber security	High	Medium	Improving
6	Country risk	High	Medium	Increasing
7	Commodity prices	High	Medium	Stable
8	Organisational culture and talent	High	Medium	New
9	Health and safety	Medium	Medium	Improving
10	ESG	Medium	Medium	Stable

Risk appetite and tolerance

Risk appetite and tolerance levels have been defined for several ESG related indicators, including TRIR, major and serious environmental incidents, the Group's carbon footprint (Scope 1 and 2) and gender equality in management. These indicators are monitored on an ongoing basis, with clear thresholds that prompt responses when tolerance levels are approached or breached.

ESG related risk information flows directly into the Group's financial risk registers and reporting. Where an ESG risk has potential to materially affect revenue, costs, asset values or access to markets, it is assessed alongside traditional financial and operational risks and escalated to the Audit and Risk Committee and Board through the ERM reports. This aligns with IFRS S1 requirements for linking sustainability related risks and opportunities to enterprise value.

ESG Risks and opportunities

The Group operates in a risk environment shaped by evolving regulatory requirements, climate transition pressures, supply chain volatility and increasing expectations from investors, customers and communities. These dynamics influence several of the Group's principal risks with sustainability dimensions, including supply chain and geopolitical risk, cyber security, health and safety encompassing process safety, ESG inclusive of climate and transition risk and organisational culture and talent.

At the same time, these risk areas present significant opportunities to strengthen resilience and differentiate the Group. By advancing sustainable innovation, partnership based decarbonisation projects with customers and reliable lower impact supply in regions where alternative providers are constrained, the Group can create long-term value. Continued focus on safety and sustainability culture, supply chain resilience, digital security capabilities and a high performance organisational culture further supports sustainable performance.

The Group risk heatmap presents risks that allow management and the Board to accurately analyse risk appetite and tolerance.

Shaping priorities together continued

Sustainable customer solutions

2025 Highlights

Sustainable customer solutions continued

Portfolio shift and customer value

The Group's portfolio is increasingly oriented towards solutions that enable customers to operate more efficiently, reducing environmental impact, regulatory exposure and also increasing climate responsiveness. The focus is on products and systems that improve resource productivity, lower operating costs and support compliance across energy, water, waste and critical safety processes.

Sustainable customer solutions continued

This shift is evidenced through the deployment of circular solutions, green chemistry applications and targeted customer initiatives. Circularity initiatives are designed around defined inputs and outputs, with performance tracked through operational indicators such as tonnes of material recovered, percentage of feedstock substitution and reductions in water use, energy intensity or emissions. These initiatives prioritise practical scalability and integration into existing customer operations. This approach supports customers in managing ESG risks while strengthening long-term commercial relationships.

Sustainable customer solutions continued

Impact case studies

Case study

Mining: Ammonium Nitrate Solution (ANSOL) implementation at PT Kaltim Prima Coal (KPC)

At PT KPC in Indonesia, the Group ANSOL replaced traditional Ammonium Nitrate (AN) Prill in emulsion manufacturing. This transition has delivered multiple benefits for customer safety, efficiency and sustainability outcomes. By eliminating the energy intensive dissolution stage, ANSOL has reduced fuel use during processing by up to 25% and cut water consumption at the site by up to 69%. The move also removes the need for chemical coating agents and eliminates waste from bulk AN bags, directly supporting waste and circularity objectives. Operationally, ANSOL improves emulsion stability and product quality, is not prone to caking during temperature changes and reduces emulsion manufacturing time by up to 25%, freeing up capacity and improving plant reliability.

ANSOL is also contributing to safer operations. Reduced handling and the removal of moving machinery in raw material transfer lowers the risk of spillages and associated incidents, while a more stable and predictable emulsion supports consistent blast performance. Combined with a reliable local supply chain, this solution demonstrates how innovation in raw material form can address safety, environmental and supply risks at once.

AECI Mining Explosives, Indonesia

Case study

Mining: Surface emulsion innovations for responsible coal mining

In the coal sector, where reactive ground and hot-hole conditions create significant safety and operational challenges, AECI Mining uses advanced emulsion technology such as its Powergel X² range to enable safer, more efficient blasting while reducing waste and simplifying logistics. Taking the Powergel range further, AECI Mining has introduced an eco-variant with excellent water resistance that incorporates recycled oil into the emulsion. Over the past decade, since integrating used oils into its various Eco bulk emulsion formulations, the business has consumed more than 80 million litres of used oil and prevented approximately 55k tCO₂e of emissions from entering the atmosphere. As Africa's first explosive manufacturer, AECI Mining has long prioritised explosives R&D and this continuous innovation is now delivering tangible sustainability outcomes for customers operating in increasingly challenging mining conditions.

Repurposed used oil:

Plant Health: Transforming agriculture with purpose

AECI Plant Health strengthened its position as a strategic growth pillar. The business sharpened its focus on integrated crop solutions that combine biologicals, crop nutrition, soil health technologies and digital agronomy tools such as Khula!. Strategic emphasis shifted from selling individual products to partnering with farmers, contract farming partners, depots and crop advisors to deliver end-to-end support that improves yields, soil condition and regulatory compliance. This approach reflects our double materiality lens: safeguarding farmer livelihoods and food security while protecting natural resources and long-term enterprise value.

Plant Health continued to build out its regional and export presence, leveraging research-led formulations, local field trials and regulatory approvals to adapt offerings to specific soils, crops and climate conditions. Technical teams worked alongside distributors and advisors to ensure that product selection and application were optimised for local realities, positioning Plant Health as a trusted agronomy partner rather than a commodity input supplier.

Agriculture with purpose

Forward focus

The operating pressures experienced in 2025 are reinforcing our focus on delivering resilient, cost efficient and sustainable solutions for customers operating in increasingly complex and resource constrained environments. In 2026, the Group will continue to prioritise circular economy initiatives, improved resource efficiency and data enabled decision making to help customers manage cost, availability and environmental risk across their operations. Evolving operating models and partnerships are being shaped around explicit ESG outcomes, enhancing transparency, traceability and long-term value creation across value chains. Continued innovation in products, services and digital advisory capabilities, supported by responsible supply chain collaboration and market led partnerships, positions the Group to support customer productivity, regulatory compliance and climate resilience, while advancing sustainable growth aligned with our Net Zero by 2050 commitment and shared value ambitions.

Beyond Zero and EHS

2025 Highlights

	Safety and health	Safety resources and tools	Leadership engagement	Lessons learned	Safety culture drive	Process safety	Compliance	Leading indicators	Certifications
Key aspects	Significant year-on-year improvement in TRIR. Zero fatalities recorded. Zero occupational health cases recorded.	Stay Safe Pocket book developed and rolled out. Toolbox talks enhanced with Beyond Zero content.	Development of Visible Felt Leadership (VFL) guideline for meaningful employee engagement.	Implemented regular focused incident learning sessions across global operations.	Launched Beyond Zero cultural integration journey.	MHI Playbooks developed focusing on encroachment and operational hazards and risk.	Integrated compliance tool for EHS management rolled out across global businesses.	Leading indicators for safety, environment and process safety embedded in the business.	Maintained applicable management systems certifications at all operations.

SDGs

Beyond Zero and EHS continued

Culture, leadership and engagement

During the year, we activated our **Beyond Zero** campaign as a renewed commitment to the fundamentals of safety, leadership and care.

Beyond Zero: culture, leadership and engagement

Beyond Zero marks a deliberate shift from a compliance led approach to one grounded in shared responsibility, trust and consistent everyday behaviours. It reinforces the belief that preventing harm is not achieved through rules alone, but through how people think, act and intervene for themselves and for others.

As part of this activation, we transitioned from a detailed framework of Critical Safety Behaviours (CSBs) and Life Saving Behaviours (LSBs) to a clear and focused set of 10 core safety principles. This shift was intentionally designed to simplify expectations, improve understanding and enable consistent application across diverse operations. The principles articulate the non-negotiables of safe work and leadership behaviour, providing a common language that is easy to remember, easy to apply and relevant to every role.

10 Life saving behaviours

1. Concentrate while driving and buckle up.
2. Secure yourself when working at heights.
3. Be authorised and competent.
4. Verify ignition sources.
5. Avoid suspended loads and moving equipment.
6. Isolation and zero energy testing.
7. Work permit required.
8. Follow journey management plan.
9. Confined spaces and atmospheric testing.
10. Always use your Personal Protective Equipment (PPE).

15 Critical safety behaviours

1. Use safe tools and equipment.
2. Avoid awkward body positioning.
3. Safe walking and work surfaces.
4. Keep clear from nip points.
5. Keep eyes on path/task.
6. Conduct safe pushing/pulling.
7. Stay clear of line of fire.
8. Secure yourself when working at heights.
9. Always use your PPE.
10. Conduct isolation and zero energy testing.
11. Maintain good housekeeping.
12. Conduct pre-job preparation.
13. Apply and adhere to warning systems.
14. Follow manual handling and lifting techniques.
15. Work permit required.

10 core safety principles

Lived

Focused on personal behaviour, responsibility and wellness

1. I take responsibility for my own safety and the safety of others.
2. I use the correct tools and equipment and apply safe techniques.
3. I drive safely and follow journey management plans.
4. I keep my eyes on the path and assess walking and working surfaces before every move.

Led

Focused on systems, structure, leadership and compliance

5. I follow approved procedures, including permits, isolation and testing.
6. I manage change effectively and ensure risks are reassessed.
7. I ensure emergency preparedness and response readiness.
8. I secure myself when working at heights and apply and adhere to warning systems.

Shared

Focused on collective care, awareness and teamwork

9. I protect myself and others from the line of fire.
10. I ensure all incidents, near misses and concerns are reported and learned from.

The 10 core principles serve as a practical bridge between policy and practice. They guide daily decision making, leadership engagement and peer-to-peer accountability, ensuring that safety is lived rather than enforced. By embedding these principles into training, leadership conversations and operational routines, we are strengthening a culture where care, vigilance and intervention are normalised.

Key milestones

- **Leadership launch:** Official introduction to **Beyond Zero** through executive endorsement affirming visible leadership commitment
- **Cross functional implementation:** Empowered the existing cross functional EHS task team to guide implementation, share best practice and monitor progress
- **Champion activation:** Site level champions were identified and trained to embed the principles of **Beyond Zero** in daily operations while focusing on critical change management aspects
- **Connect sessions:** Interactive sessions held across global business units to create dialogue, share local insights and foster ownership
- **Communication campaign:** A multi-channel campaign to reinforce key messages and encourage engagement
- **Introduced Zoe Zero:** Our new, relatable symbol of life and care, who facilitates an inclusive and future focused narrative that resonates with all our employees emphasising their roles as safety leaders

Beyond Zero and EHS continued

Meet Zoe Zero

The face of Beyond Zero

Zoe's name means life and that's exactly what she stands for:

Protecting and caring for our people so everyone goes home safely every day.

Her power is that she is deeply human, leading through care, courage and connection.

She represents

Z

Zoe compromise and zero excuses

Do the right thing, even when no-one is watching.

Stop unsafe work.

Follow the safety behaviours. Set the example.

O

Observant and ownership driven

Look for hazards before they cause harm.

Report what you see. Take action where you can.

If something's wrong, for it or tell your supervisor.

E

Empowered and empathetic

Speak up, your voice matters.

Look out for your teammates.

Share your knowledge and help others stay safe.

ZERO

Beyond Zero

It's more than avoiding harm. It's creating safety together.

Protect our people, our planet and our future. Lead by example.

Make sustainability and safety part of your mindset.

Zoe reminds us that sustainability and safety aren't just what we do. They are who we are. Through Zoe, we make **Beyond Zero** real where sustainability and safety are **Lived.Led.Shared**.

We are One AECI, for a better world

Beyond Zero will be supported by proactive leading indicators such as leadership engagement, employee participation, critical control assurance, near-miss learning and wellbeing tracking that make safety and sustainability part of who we are, not just what we do.

Beyond Zero is not a campaign in isolation; it is a foundational element of our broader safety and sustainability strategy. By reinforcing the basics and simplifying what matters most, the Group is building a safer, more resilient organisation, one where everyone is empowered to contribute to harm prevention and where safety and sustainability remain inseparable from long-term value creation.

AECI Mining, Indonesia: Beyond Zero launch

AECI Mining, Botswana: Beyond Zero launch

AECI Mining, Indonesia: Beyond Zero launch

Beyond Zero and EHS continued

Safe and responsible performance

In 2025, we recorded zero work related fatalities across the Group and while this is an important milestone on our **Beyond Zero** journey, we do not see it as a destination: one injury is one too many.

We therefore continue to prioritise reporting of near miss incidents, strengthen critical controls and use leading indicators to sustain and improve this level of performance.

Our occupational safety performance is tracked through TRIR, Fatality Injury Rate (FIR), Lost-Time Injury Rate (LTIR) and Non-Lost Time Injury Rate (NLTIR).

AECI Total Recordable Incident Rate (TRIR)

Overall, the TRIR trend shows an improvement over the period, with fluctuations that reflect changes in exposure hours and the mix of operations as the Group has reshaped its portfolio.

We are encouraged by the continued improvement in our safety performance, reflecting the impact of focused interventions and our **Beyond Zero** philosophy, which reinforces the belief that all incidents are preventable and that safety must be Lived.Led.Shared across our operations.

In 2025, we recorded 17 occupational safety recordable incidents, a significant improvement compared to 31 incidents in 2024. This resulted in a reduction in the TRIR from 0.31 in 2024 to 0.20 in 2025, meeting our internal TRIR limit set for the year. Importantly, no major incidents were reported during the period. Furthermore, we are pleased to report that there were no occupational illnesses recorded for the year.

While this performance reflects meaningful progress, we remain ever mindful that sustained improvement requires continuous focus and strong operational discipline. Guided by the **Beyond Zero** mindset, we continue to prioritise proactive hazard identification, critical risk management and leadership accountability to prevent injuries and fatalities.

Through ongoing learning, strengthened oversight and continuous improvement, we remain committed to protecting our people and ensuring safe, reliable operations for all stakeholders.

Given the Group's exposure to high hazard chemicals and explosives, process safety is a key focus area for strengthening barriers and critical controls. We track our performance using the PSTIR, encompassing both reportable and non-reportable process safety events.

Process Safety Total Incident Rate (PSTIR)

Note: Although the Group recorded only three additional process safety incidents compared to the previous year, the significant decline in performance is primarily attributable to a reduction in manhours resulting from the divestment of several businesses, as well as organisational restructuring during 2025.

In 2025, our process safety improvement efforts focused on strengthening the foundations of safe operations across the value chain. Key actions included:

- Integrating process safety governance earlier in R&D and innovation workflows, so that new products and solutions are designed with inherent safety in mind while still enabling agile development
- Enhancing oversight and enforcement of statutory inspections, ensuring compliance with legal requirements and timely closure of identified findings
- Intensifying preventative maintenance programmes to protect plant and process integrity and reduce the likelihood of equipment failures and loss of containment events
- Closely monitoring process safety critical equipment and aligning it to defined critical controls, so that barrier health is visible and can be acted on proactively

Process safety performance is reviewed by the Executive and Board-level committees and forms part of our broader ERM process in line with IFRS S1 expectations on operational risk and resilience. These measures support a more resilient process safety culture, reduce the likelihood of major incidents and underpin the Group's ability to operate complex, high hazard facilities safely over the long-term.

Transportation related product incidents decreased from 27 to 26:

- Road transportation remains inherently high risk due to factors such as infrastructure challenges, adverse weather and criminal activity
- Robust controls continue to be implemented to prevent incidents and limit potential impacts
- Key initiatives include enhanced transporter screening and due diligence to ensure engagement with reputable service providers, strengthened service level agreements to reinforce safety and stewardship expectations and periodic complaint audits to monitor performance and drive continuous improvement

Beyond Zero and EHS continued

We continue to monitor and track environmental incidents across all our operations and are pleased to report that zero major or serious environmental incidents have occurred over the past 10 years. Our moderate environmental incidents have also shown a decreasing trend and continue to remain a focus area for operational excellence in environmental management.

AECI Group Environmental Incidents

Case study

Lived.Led.Shared: Stewardship across the agricultural value chain

Plant Health's stewardship work reflects the Group's commitment that safety and sustainability are Lived.Led.Shared across the value chain. In 2025, the business invested significant time and effort in training crop advisors, agents and farmers on pest control operator licensing requirements and changes in legislation. These programmes ensure that on farm decision makers remain up to date on safe storage, application and disposal of products. During on farm training days Plant Health also provided personal PPE to farm workers, reinforcing its **Beyond Zero** focus on preventing harm rather than simply responding to incidents.

Case study

Safety and product stewardship: Extending Beyond Zero to customer sites

Safety remains foundational to the Mining business model and license to operate. In 2025, Mining continued to embed our **Beyond Zero** safety philosophy through leadership visibility, behavioral programmes and critical control management at its own sites, while also focusing on how its products and technologies can improve safety outcomes at customer operations.

Innovations such as ANSOL, TNT-free boosters and mobile charging units reduce manual handling, limit exposure to hazardous substances and improve the predictability and control of blasting processes. These technologies support Mining customers' own safety strategies and contribute to reduced incident potential along the value chain, aligning with our material topics on health, safety and wellbeing, product stewardship and ethical business conduct.

AECI Group, implementation toolkit

Forward focus

We will continue embedding Beyond Zero as a foundational element of our safety and sustainability strategy, strengthening leadership accountability, critical control assurance and proactive leading indicators such as near miss reporting, employee engagement and wellbeing tracking. Building on improved TRIR performance, zero fatalities and zero occupational health cases in 2025, our focus will remain on sustaining disciplined execution across high hazard operations, deepening process safety governance, enhancing transport risk management and reinforcing integrated EHS compliance systems. Through continuous learning, VFL and simplified core safety principles, we aim to advance our safety maturity journey, ensuring that safety and health are Lived.Led.Shared across all operations and remain inseparable from long-term value creation.

Engaged people, strong culture

2025 Highlights

	Leadership capability	Female representation	Workforce learning	Youth employability	Inclusion of people with disabilities	Sector skills investment	Employee Assistance Programme (EAP) utilisation	Wellness awareness and education	Preventative health and financial wellbeing
Key aspects	360° Leadership assessments completed for all leaders Launched coaching to reinforce consistent leadership behaviour.	30% female representation in 2025 up (~5%) from 2024 Target of 50% female NED representation on the Board achieved.	3 749 employees accessed at least one learning opportunity.	250 learners and graduates participated in learnerships, internships, apprenticeships and graduate programmes.	41 participants, of whom 66% were women.	R27.7 million invested in Chemical Industries Education and Training Authority (CHIETA) skills development.	~18% EAP utilisation rate globally, indicating increased willingness to seek support proactively.	~2 900 attendances at health and wellness education sessions across multiple geographies.	Expanded preventative screening in South Africa, Botswana and Zimbabwe, alongside a ~5% decline in financial crisis interventions.
Capitals									

SDGs

Engaged people, strong culture continued

Culture philosophy

We create safe, engaged and high performance workplaces through deliberate, integrated people practices that place care, trust and accountability at the centre of how we lead and operate.

Our employees remain central to delivering our strategy and sustaining long-term value creation. Guided by our purpose, **We Are One AECI**, for a Better World, our strategy to sustain engaged people is underpinned by the AECI Culture Code of Trust, Authenticity, Better Together and Empowered, which shapes how we lead, collaborate and perform across our global operations. Anchored in this cultural foundation, our framework is built on four strategic pillars:

- Fostering a strong organisational culture and employee engagement by embedding our values, strengthening leadership alignment and enabling employees to connect their contribution to our broader purpose
- Building differentiated capabilities for a future fit organisation by developing critical skills, strengthening succession pipelines and cultivating servant leadership that empowers teams to perform and grow
- Strengthening our Employee Value Proposition (EVP) to attract, retain and motivate talent across multiple generations, geographies and cultures, ensuring our people are energised, capable and aligned to deliver sustainable business outcomes
- Aligning performance and rewards with strategic priorities, reinforcing a transparent and fair system that recognises collaboration, high performance and behaviours that support our culture

Collectively, these pillars are enabled through integrated change management, digital and data driven insights, a comprehensive talent development ecosystem and the development of capable, courageous and inclusive leaders who invest in the growth of our people and ensure the long-term resilience of the organisation.

During the year, we strengthened the alignment between leadership behaviour, wellbeing, inclusion and learning and digitised people systems to ensure that our culture intent is consistently experienced across the Group. Anchored in our Culture Code and Leadership Compact, these practices reinforce psychological and physical safety, build leadership capability and enable our people to feel seen, heard and valued. Together, they support sustainable performance by unlocking discretionary effort, ethical conduct and long-term workforce resilience.

We are building a high performance culture anchored in service, trust, authenticity, collaboration and empowerment. Guided by the belief that **“If service is beneath you, leadership is beyond you,”** we set clear expectations for leadership at every level and lead by example in how we develop our people, care for one another and create value for employees, customers, communities and shareholders.

From culture intent to lived experience

As our strategy execution accelerated, we recognised the need for greater consistency in leadership expectations, behaviours and accountability across the Group. In response, we strengthened culture as a strategic lever, embedding the Culture Code and Leadership Compact as our operating framework to translate culture intent into a consistent, high performance lived experience.

Our culture code

Collectively, our approach moved from intent to execution during the year, supporting the embedding of the Leadership Compact and Culture Code and enabling a consistent, high performance culture aligned to our strategy.

Engaged people, strong culture continued

Engagement channels and impact

During 2025, we strengthened our multi-channel, leader led engagement to improve clarity, alignment and connection across the Group. Engagement evolved from information sharing to dialogue and feedback, enabling employees to understand change, raise concerns and link everyday work to strategic priorities.

Culture compact engagement

Culture compact engagement

Key improvements in digitising people practices include:

Focus area	What this enables	People and business value
Recruitment and onboarding	Seamless transition from hiring to day one readiness	Improved employee experience, faster onboarding, reduced manual errors
Workforce and position management	Clear visibility of roles, structures and approvals	Stronger workforce planning, accountability and control
Payroll governance	Standardised, auditable payroll inputs	Improved accuracy, transparency and control
Systems governance	Formal oversight of system changes and data integrity	Reduced operational and compliance risk
Employee self-service	Employees manage key transactions directly	Reduced manual intervention, faster turnaround times, improved experience
Data and analytics	Reliable, consistent people data across the Group	Data led decision making and effective workforce analysis
Global scalability	Consistent people practices across geographies	Supports business growth and organisational transformation
Culture and ethics alignment	Consistent application of people standards	Reinforces ethical conduct and cultural alignment

Together, these enhancements strengthen workforce visibility, enable more data led decision making and support effective workforce analysis, while ensuring that our people practices remain aligned to our Culture Compact and Code of Ethics and are consistently applied across the Group.

Engaged people, strong culture continued

Wellbeing, inclusion and fair work

Scaling the global **Better You** wellness offering

We expanded the **Better You** wellness offering across our global operations, extending equitable, culturally relevant support beyond South Africa. This included the launch of EAP services in multiple countries, supported by a global wellness resource portal and the **Better Health** education series, improving access to mental health, stress and change related support across the Group.

Utilisation data shows early impact, with EAP usage at ~18%, reflecting a shift towards proactive support seeking.

Attendance at health and wellness education increased to more than 2 900 sessions, while expanded preventative screening in South Africa, Botswana and Zimbabwe enabled earlier identification of key health risks and improved access to timely support.

Map key

- A Better You resource portal
- Better health promotion access
- Company employee assistance programme
- Voluntary wellness screenings and wellness activities
- Better manager programme

Employee wellbeing is at the heart of our culture and a critical enabler of engagement, safety and sustainable business performance. In 2025, we strengthened our commitment by integrating the **Better You** wellness strategy and the **Better Manager** programme into our Leadership Academy ensuring leaders are equipped to champion psychologically safe, inclusive and high performance workplaces, reinforcing our purpose of creating a better world through a better employee experience.

Engaged people, strong culture continued

Diversity, Equity and Inclusion

DEI is a core enabler of our culture, performance and long-term value creation.

In 2025, we transitioned from fragmented initiatives to an integrated, enterprise wide DEI approach, strengthening governance and executive accountability through the establishment of the DEI Council with oversight from the SESC¹. Our focus extended beyond compliance to embedding lived inclusion, psychological safety and leadership capability across the organisation, supported by a structured DEI maturity framework.

Targeted programmes supported this ambition, including initiatives advancing inclusion for People with Disabilities, LeanIn Circles to strengthen inclusive leadership and gender equity and the Women in Operations programme aimed at building capability and progression in technical and operational roles. In parallel, we initiated a localisation led DEI baseline across our international operations, aligning global inclusion principles with local context and statutory requirements while maintaining consistent Group standards and governance.

Within South Africa, this approach is anchored in national transformation legislation. Employment Equity (EE) and B-BBEE therefore remain central to our agenda, with our EE Plan aligned to the Manufacturing Sector targets to 2030 to increase representation of designated groups across occupational levels.

During the year, we further strengthened inclusive ownership through enhanced mining ownership structures that include communities and broad-based participation, together with the establishment of our ESS to create long-term shared value for employees and stakeholders.

Future Leader Programme

Group: Permanent employee gender profile

Group: Temporary employee gender profile

Men Women

2030 target

We are committed to achieving gender parity across all Group levels. While we have made progress in advancing gender equality at top management level, we recognise that more work is needed for equitable representation at all levels. To achieve this, we have set clear targets for 2030 to increase female representation in top, senior and middle management and operational roles. These targets focus on areas where gender gaps remain, with an emphasis on tracking progress to ensure balanced representation.

Our strategy includes targeted recruitment, mentorship and leadership development programmes, along with a supportive work environment that fosters equal growth opportunities. By reaching these targets, we aim to create a more inclusive, diverse workforce aligned with our values of fairness, respect and responsibility.

Engaged people, strong culture continued

Skills development

Our skills development portfolio supports our strategy by integrating leadership, technical and future skills training across the Group.

This framework builds critical capabilities for Mining and Chemicals, strengthens talent pipelines and advances gender and DEI goals such as the 2025 Women in Operations initiative. These efforts ensure that we can meet changing stakeholder expectations and develop a resilient workforce.

In 2025, we reinforced our commitment to developing leadership capability and future ready skills globally across the Group. A total of 93 employees participated in leadership development programmes, while 250 individuals engaged in learnerships, internships, apprenticeships and graduate programmes to strengthen youth employability and our talent pipeline. Gender diversity remained a priority, with women representing 49% of youth programme participants. Participation from Latin America (LATAM), Ghana and Botswana accounted for 4.6%, underscoring our deliberate focus on building and future proofing critical skills across our global operations.

Overall, 3 749 employees accessed at least one learning opportunity, of whom 33% were women. In total, 41 people living with disabilities participated in Learnerships and Graduate Development programmes and 66% are female. Together, these results show how our skills development portfolio is enabling a culture of continuous learning, talent development, diversity and future readiness at the Group.

Leadership development and future ready skills

Leadership capability is central to our people, safety and culture agenda. In 2025 we maintained leadership development as a strategic KPI, with Group targets for the number of employees participating in structured programmes such as the Foundation, Middle and Senior Management Development Programmes (FMDP, MMDP and SMDP). A total of 93 employees (2024: 91 employees) completed these programmes during the year with a spend of R98.1 million, representing diverse operations across South Africa and key international markets. The leadership programme content was aligned to the Leadership Compact and Culture Code to inculcate and build the behaviours and capabilities required of current and future leaders. The focus includes inclusive leadership, future-ready skills (including digital, data and sustainability literacy) and cross-functional collaboration. Leadership development is explicitly anchored in the Culture Code and **Beyond Zero** philosophy, reinforcing that safety, ethics and care are non-negotiable dimensions of performance.

Number of employees who attended leadership development programmes

We have developed various e-Learning and virtual reality (VR) training interventions to impart knowledge and skill to operate and maintain our proprietary equipment in a safe and controlled virtual environment. The e-learning option provides employees with ease of accessibility to training material remotely. The VR training on the other hand offers a practical immersive simulation of real world scenarios without the associated risks. This combination supports our commitment to innovation, skill enhancement and safety. This content is also available to our contractors and customers.

Development programmes	2021	2022	2023	2024	2025	Programme focus
Leadership development programmes	144	133	99	91	93	Our Leadership Development Programme nominations were strategically aligned with succession planning and talent management processes to strengthen leadership capabilities at all management levels.
Learnerships / internships / apprenticeships / graduates	188	376	245	376	250	Youth employability and the talent pipeline remain a key focus, supporting future ready skills across the Group.
Participation in at least one learning opportunity	1 985	1 636	1 414	2 294	3 749	There was a strong focus on employee development, driven by improved access to training and strategic on the job initiatives.
Female participation in at least one learning opportunity	27%	47%	26%	31%	33%	Stringent assessment was applied pertaining to suitability of applicants for appropriate placement, resulted in lower participation rates.
Employees living with disabilities participating in learning programmes	66	67	40	76	41	
Female employees living with disabilities accessing learning opportunities	67%	64%	38%	53%	66%	
Bursaries (external and employee dependents)	37	26	24	99	97	Bursary allocations vary as they are concentrated on the Group's needs, while employee dependents pursue studies in various fields.

Engaged people, strong culture continued

Partnership with CHIETA

Skills development remained a core lever in building a safe, engaged and future ready workforce. In 2025, we continued our partnership with CHIETA, investing R27.7 million in Skills Development Levies (SDL) to support accredited learning pathways, apprenticeships and youth programmes across our businesses, with a focus on deepening programme quality, closing critical skills gaps and supporting inclusion and operational excellence.

We used our external bursary scheme to build future skills and expand access to higher education for under-represented students, disbursing approximately R9 million through accredited partners.

Aligned to the Quality Council for Trades and Occupation (QCTO) framework, the scheme supports critical disciplines and reinforces our strategy.

We recognise that continuous learning and career progression are critical to building a capable, future ready workforce. Through targeted financial support for tertiary studies and early career development pathways, we enable employees and aspiring professionals to strengthen their qualifications, deepen specialist skills and progress into more complex and value adding roles.

Skills turnover

Skills turnover remains a key indicator of workforce stability. Through enhanced graduate, learnership and leadership programmes, together with clearer career pathways and mentorship, we are strengthening retention of critical skills and supporting a high performance culture.

Labour practices

We are committed to labour practices that uphold fairness, dignity and constructive engagement.

In 2025, fair labour relations and wage negotiations in Ghana were conducted within a framework of constructive engagement, mutual respect and transparent dialogue, underpinned by fair and responsible talent practices. Through structured consultations with employee representatives and union partners, the process balanced the need to protect employee wellbeing and purchasing power with the sustainability and competitiveness of the business in a challenging economic environment. Informed by market benchmarks, inflation trends and productivity considerations, the parties reached a collective agreement on a 5.5% wage increase, reflecting a shared commitment to equitable remuneration, skills retention and long-term workforce stability.

In South Africa, existing wage agreements remain in effect during the current negotiation period, with continued engagement planned ahead of formal renegotiations commencing in 2026. This outcome reinforces a culture of trust, compliance with applicable labour legislation and the Group's broader commitment to fair work, ethical employment practices and inclusive growth.

We are committed to fair, responsible and equitable remuneration practices that support decent living standards, talent retention and long-term value creation. Pay equity is reviewed annually by the Remuneration and Human Capital Committee and is closely linked to talent management and succession planning.

RSA: Total guaranteed package by gender (%)

Read more in our RR pages 8 to 10

Guided by the principles of the UNGC, the Group upholds human dignity, rights and wellbeing, supports freedom of association and collective bargaining and embeds ethical and inclusive labour practices through its policies and governance frameworks; no incidents of discrimination, child labour or forced labour were reported during the year.

ESG-linked remuneration plays an important role in aligning leadership incentives with sustainability outcomes. Selected ESG KPIs with trajectories to 2030 are progressively incorporated into management's long-term incentives under the Remuneration Policy. Performance against these ESG indicators increasingly informs both short- and long-term incentives alongside financial and operational measures. This creates a clear link between the Group's sustainability commitments, their delivery in operations and leadership remuneration outcomes and reinforcing accountability for value creation and preservation.

Our people remain a key enabler of our long-term value creation. Our focus will be on delivering a consistent, inclusive and future ready employee experience, anchored in our EVP and responsive to local context and regulatory requirements. We will strengthen local talent pipelines, workforce planning and critical skills development, while standardising remuneration and reward frameworks to promote fairness, transparency and internal equity.

Employee engagement and DEI will remain central to our strategy, with continued emphasis on inclusive leadership, belonging and psychological safety. As we move into the next phase of our culture journey, we will further embed the Culture Compact, reinforcing consistent behaviours and leadership accountability so that our values are Lived.Led.Shared across the Group.

Forward focus

Sustaining natural capital

2025 Highlights

	Strategic ambition	Improved governance	Data integrity enhancement	Water consumption	Effluent discharge	Hazardous waste
Key aspects	Nature and water stewardship is embedded as a core enabler of the sustainability component of Beyond Zero , recognising climate, water and biodiversity as interconnected value drivers.	Further embedding of existing governance structures such as the Sustainability and EHS Steering Committee and the Sustainability Council.	Group sustainability reporting standard finalised and embedded into operations ensuring consistency in reporting.	Achieved an absolute reduction of 13% from the 2022 baseline.	Achieved an absolute reduction of 12% from the 2022 baseline. Plant Health: ~584kL water recovered and ~805kL effluent reused at Modderfontein.	Achieved a 38% reduction from the 2022 baseline. 92% reduction in waste sludge at Plant Health.

Sustaining natural capital continued

Environmental resilience

We recognise that long-term value creation depends on the health of the natural systems that support our business and communities.

Climate change, water scarcity and biodiversity loss are increasingly interconnected and material to our strategy. Guided by IFRS S1, encompassing the TCFD and TNFD, we are strengthening our governance, data management and responses so that climate and nature related considerations are embedded in decision making, capital allocation and operational planning across the Group.

Our ambition is to steward nature and water security in a way that supports long-term resilience. This means managing climate and nature related risks, investing in resilient operations and enabling thriving ecosystems around our sites. We are embedding the TNFD LEAP approach into our sustainability and risk management processes to identify and prioritise nature related sensitivities across our operations, evaluate key dependencies and impacts and assess associated risks and opportunities. These insights will inform defined responses, targets and decision making, aligned with our financial planning, capital allocation and ERM frameworks.

The Board remains responsible for the overall governance, strategic direction and management of the Group, including oversight of climate and environmental matters. Up to 2025 the Board delegated, primary responsibility for detailed oversight to the SESC¹ and the EHSC, which ensured that principles of integrity, accountability and transparency are embedded throughout the Group.

From 2026 onwards, these committees have been combined into one SESC² which will continue to exercise oversight in these critical matters.

Our sustainability strategy, which encompasses climate change, water stewardship and environmental management, is led by our Group Executive Committee and guided by the Sustainability and EHS Steering Committee, together with councils which advise the dedicated task force and specialist working groups regarding coordinated implementation across the Group. These structures support the execution of Group strategy, monitor performance and ensure that sustainability priorities are translated into operational plans at business unit level. Management teams are expected to identify and manage nature related risks, build internal capacity and maintain a cycle of continuous improvement in environmental performance.

Governance level	Role in climate and nature oversight
Board	Sets strategic direction, approves climate and nature related policies and targets, oversees alignment with risk appetite and long-term value creation.
Board committees	Monitor climate, water and biodiversity risks and opportunities, review TNFD and IFRS disclosures and oversee compliance with environmental regulations.
Executive management	Integrate climate and nature considerations into strategy, capital programmes and operational plans and ensure adequate resourcing.
Business units and sites	Identify and manage local climate and nature related risks, implement mitigation and adaptation projects and report performance data.

Our operations rely on water, land and ecosystems across a range of geographies and climatic conditions. Many of our activities are situated in water stressed regions and in biodiversity rich landscapes. Umbogintwini is located within the Durban Metropolitan Open Space System, surrounded by conservation areas such as Mamba Valley, Umbogavango and Vumbuka reserves, eKuthuleni Valley and the on site arboretum, while Modderfontein includes reserve areas with wetlands and diverse bird species. Brownfield sites, which are previously developed or contaminated lands, are central to our industrial footprint and present both environmental risks and opportunities for regeneration and sustainable development.

Building on the existing biodiversity management philosophy, we are mapping priority sites for TNFD LEAP purposes. These include water stressed facilities with high abstraction, discharge or effluent risk, as well as sites where our activities intersect with sensitive ecosystems, protected areas, nature reserves or community conservation areas. The Umbogavango and Modderfontein nature reserves, which already showcase our long standing commitment to conservation and environmental education, are examples of priority landscapes where stewardship and partnerships can be deepened.

Sustaining natural capital continued

Understanding our dependencies and impacts

Our operations depend on healthy natural systems. Reliable water supplies, stable climates, productive soils and functioning ecosystems are essential for safe, efficient and profitable operations across our Mining and Chemical segments and Plant Health business. Water is critical for processing, cooling and cleaning, while land and ecosystems support our operations through raw materials, site availability and natural services such as flood regulation, erosion control and pollution mitigation.

This dependence shapes our approach to biodiversity and land management, particularly at historically impacted or brownfield sites. Our strategy balances environmental protection with responsible redevelopment, focusing on remediation, restoration and suitable end-use of land. By rehabilitating contaminated areas, investing in environmentally responsible infrastructure and working with local communities, we aim to reduce environmental risk while enabling long-term economic and social value.

Through our ecosystem programmes, these principles extend beyond brownfield sites to our wider portfolio. The programme supports sustainable resource use, ecosystem restoration, education and awareness for employees and communities and innovation in nature based solutions. Partnerships with environmental and community organisations and policymakers help strengthen biodiversity outcomes and contribute to long-term conservation efforts.

Assessing climate and nature related risks

Climate change and nature loss present increasing risks to our business. We assess both physical risks, such as water scarcity and changing climate conditions and transition risks linked to evolving regulation, policy, technology and market expectations.

These risks are integrated into the Group's ERM framework. Environmental and nature related risks are treated as principle ESG and EHS risks and linked to strategic priorities such as sustainable profitability and license to operate. Risk appetite statements are being refined to better reflect exposure to water stress, environmental compliance, remediation obligations and biodiversity loss.

As these risks intensify, we are enhancing resilience planning. Looking ahead climate scenario analysis will be used to assess how different climate aspects and policy responses could affect our operations, supply chains and markets over the short-, medium- and long-term. This will help to guide mitigation and adaptation priorities.

Responding with action and targets

Our climate response is guided by our Net Zero by 2050 commitment and focuses on low carbon, climate resilient solutions, improved industrial efficiency and responsible resource use. These actions support both near-term performance and long-term transition to a lower carbon economy.

Our biodiversity strategy prioritises sustainable resource use, ecosystem restoration and responsible land management. This includes responsible sourcing, remediation of impacted ecosystems and biodiversity enhancement through actions such as re-establishing indigenous vegetation and creating ecological corridors. Capacity building initiatives with employees, suppliers, communities and partners strengthen shared responsibility for outcomes.

Water stewardship remains a key focus. At priority sites, we are investing in technologies that reduce water use, increase reuse and recycling and improve effluent quality. AECI Water's Remote Smart Monitoring System, which uses solar powered sensors to deliver real time water quality data even in off-grid locations, supports regulatory compliance, reduces environmental risk and enables data driven decision making while lowering operational costs.

To manage climate and nature related risks and opportunities effectively, we track a set of environmental indicators that are being aligned to the TNFD LEAP framework and the Group's sustainability targets. Collectively governance, risk and impact management and actions and targets build on existing IFRS (encompassing TCFD) and TNFD metrics.

Sustaining natural capital continued

Environmental stewardship

Environmental stewardship remains integral to how we manage our operational footprint, with a focus on responsible performance across the Group.

Water

Water security is a material operational and financial consideration for the Group, particularly in water stressed mining and industrial environments where water availability poses an operational challenge.

At Group level, while potable water consumption decreased year-on-year by 5%, we are pleased to report an overall **13% decrease from our 2022 baseline** supported by improved water efficiency and reuse practices. Year-on-year discharge to sea or sewer increased by 10% largely due to plant upsets and production challenges in the Mining Explosives business. This is counterbalanced by improved performance of a **12% decrease against our 2022 baseline**.

Case study

Plant Health: Recovering water, reducing effluent

At the Modderfontein Plant Health site, process optimisation and recovery initiatives delivered material water and effluent savings. Approximately 584kL of water was recovered via optimised recovery of condensate from steam coils and steam traps. The condensate, previously discharged as effluent, was redirected into a repurposed recovery tank and utilised in urea solution production. In parallel, recovery of calcium and magnesium rich effluent enabled about 805kL of treated effluent to be reused. These actions reduce potable water demand, cut effluent volumes and support our climate and water objectives by lowering the energy required for water treatment and wastewater handling.

Water stewardship: Positioning for future water security

Water reuse, recycling and zero liquid discharge solutions remain central to the Group's water strategy. Ongoing focus areas include scaling high impact reuse technologies, expanding digital monitoring platforms and leveraging partner capabilities to support customers in meeting tightening water stewardship and discharge expectations.

AECI Water, treatment skid, South Africa

Sustaining natural capital continued

Waste

During 2025, we continued to reinforce disciplined waste management and circularity practices, with a particular focus on improving hazardous waste management disposal. Clearer standards, improved segregation, enhanced contractor oversight and increased operational awareness strengthened control across the hazardous waste lifecycle, contributing to a **38% improvement from our 2022 baseline** and a 22% year-on-year reduction in waste. Building on this progress, the Group is embedding waste minimisation and circularity principles into operational planning and daily decision making. Looking ahead, we aim to deepen circularity by expanding partnerships with customers to co-develop circular waste programmes that recover value from waste streams, support closed-loop solutions and deliver shared environmental outcomes across the value chain.

During 2023, a review of baselines was conducted and it was evident that waste management required more focused attention, particularly in relation to volumes of hazardous waste disposed and the setting of a relevant baseline. Based on the most recent available data at the time, the baseline for hazardous waste was set at 16 000 tonnes. This has continued to be used for the past three reporting periods and has since been updated to 7 120 tonnes for the 2025 baseline.

Hazardous waste disposed (tonnes)

Recycled waste (tonnes)

Case study

Circular, efficient and sustainable business: Closing the loop at AECI Plant Health

AECI Plant Health delivered a step change in circularity by reusing process waste sludge back into production, reducing disposal from 191 tonnes in 2024 to 15 tonnes in 2025; a 92% reduction. This closed-loop solution reduced embedded energy and chemical losses and lowered the environmental footprint of manufacturing.

Packaging circularity was further strengthened through reusable and recyclable containers, pallet and drum return programmes and alignment with Extended Producer Responsibility requirements, supported by collaboration with customers, suppliers and logistics partners.

Enhanced water and electricity metering improved data quality and performance tracking, enabling more granular efficiency management and supporting future resource optimisation and decarbonisation planning.

Consideration is given to higher operating costs due to water treatment and abstraction, remediation costs arising from environmental incidents and the risk of stranded or underutilised assets in sensitive or degraded ecosystems. At the same time, opportunities are identified where investments in water efficiency, renewable energy, circular resource use and ecosystem restoration can reduce costs, enhance resilience, strengthen license to operate and open new markets.

Future TNFD aligned disclosures will provide greater transparency on how nature related risks are reflected in our risk register, how they influence our portfolio optimisation and capital allocation decisions and how they are connected to our SLFF. This will support investors, lenders and other stakeholders in understanding how we are stewarding natural capital while building a resilient, inclusive and sustainable business for the long-term.

Sustaining natural capital continued

External disclosure

We participated in the CDP, a global environmental disclosure platform that assesses how organisations measure, manage and disclose climate and water related risks and opportunities. Through this process, we submitted detailed environmental data and governance information, which CDP independently evaluates and scored us against internationally recognised disclosure and management criteria.

CDP overall and category scores (2025)

Disclosure area	Overall score	Salient KPIs assessed in category scores
Supplier Engagement Assessment	B	Governance: Strong oversight of climate related issues Targets: Clear emissions reduction goals in place Scope 3: Active management of indirect emissions Engagement: Collaboration across the value chain
Climate change	B	Governance (A) Business strategy (B) Risk and opportunity disclosure (A) Scope 3 emissions disclosure (A-)
Water security	B	Governance (A) Risk disclosure (A) Water accounting (B) Water pollution management (B)

These scores provide an external benchmark of the maturity and transparency of our environmental management practices, particularly in areas such as climate governance, emissions management and water stewardship. The results help the Group identify strengths and improvement opportunities while demonstrating accountability and progress to investors, customers and other stakeholders. CDP independently scores AECI's environmental disclosures on a scale from A (leadership) to D (disclosure).

Our B ratings, on the new and revised scoring methodology, across climate change, water security and supplier engagement reflect progress in governance oversight, climate risk disclosure and emissions management, supporting the Group's continued advancement towards our Net Zero pathway and broader sustainability ambitions.

Forward focus

As we look to 2030, our focus is on disciplined delivery against our refreshed environmental targets. These commitments, aligned to our Net Zero Pathway and embedded within our SLFF, will be supported by scaled water reuse, energy efficiency, renewable electricity adoption, circular waste solutions and strengthened data governance. By integrating climate and nature related risks into ERM and capital allocation, we are reinforcing environmental resilience as a core driver of operational continuity, license to operate and long-term value creation.

Our pathway to decarbonisation continued

Targets and ambitions

We continued to advance our Net Zero Pathway, while refining our metrics to reflect changes in the Group's portfolio.

Our 2030 ambition is to reduce carbon emissions by 15% relative to our restated 2025 baseline, reflecting changes due to divestments.

During the year we made further progress on projects that support this objective, particularly the expansion of renewable electricity and energy efficiency initiatives that strengthen our decarbonisation pathway and improve electricity security. Our integrated approach to managing electricity supply risks, together with defined decarbonisation pathways and climate risk management processes, demonstrates our ongoing commitment to a sustainable, low carbon future that creates long-term value for our stakeholders.

We remain committed to a just transition that is fair and inclusive, particularly for vulnerable communities most exposed to climate impacts and existing socioeconomic inequalities. The Group recognises the critical role of the private sector in enabling this transition through partnerships, sound risk management and constructive policy engagement.

Theme	Metric	2022 baseline	2025 result	2025 baseline	2030 target	2030 improvement target (from 2025 baseline)
Energy	Electricity Purchased (MWh)	217 992	180 923	123 643	113 751	8% decrease
	Total energy (GJ)	3 287 645	2 715 692	2 265 846	2 039 261	10% decrease

Carbon	Scope 1 emissions (tCO ₂ e)	267 919	162 998	154 289	129 140	16% decrease
	Scope 2 emissions (tCO ₂ e)	225 882	202 502	160 397	139 866	13% decrease
	Total carbon footprint (Scope 1 + 2, tCO ₂ e)	493 801	365 500	314 686	269 006	15% decrease
Water consumption	Potable water (m ³)	1 793 455	1 553 625	1 448 085	1 230 872	15% decrease
Effluent discharge	Effluent discharge to sea or sewer (m ³)	751 880	663 004	581 991	523 792	10% decrease
Gender equality	Female representation at top, senior and middle management (%)	28	30	29	42%	50% increase

2030 sustainability targets

In 2025, our 2030 ESG targets in line with the Group's Net Zero by 2050 commitment and the SLFF were finalised. The approved targets focused on three strategic indicators that are most material to our ESG aspects: carbon footprint inclusive of Scope 1 and Scope 2, water consumption and discharge and gender equality.

Changing portfolio dynamics and recent divestments required a restated 2025 baseline for the key ESG indicators. From 2026 onward, progress will be measured against this baseline, improving comparability and ensuring that trajectories reflect our current operating footprint. Historical performance from 2022 to 2024 was used to test trends and to ensure that the new targets are ambitious yet achievable, given planned efficiency projects, production projection related to growth targets, resource constraints and the evolving regulatory landscape.

Scope 3 emissions remain a significant component of our total carbon footprint and an important element of our transition plan. We focused on improving data coverage, supplier reporting and management of the top five Scope 3 categories and aim to have a

2030 target finalised once data quality and influence levers are sufficiently robust. This phased approach reflects both impact materiality, given the scale of Scope 3 emissions and financial materiality through potential exposure to supply chain disruption, customer expectations and emerging regulation.

We have set carbon targets above recent performance levels to reflect anticipated production growth. While absolute emissions may increase as the business expands, our ESG performance measured through improvements in emissions intensity and operational efficiency will reflect performance over our five year target period. This ensures a best practice aligned transparent trajectory that supports growth while remaining focused on our Net Zero by 2050 commitment.

AECI Mining Chemicals, Sasolburg, South Africa, solar farm

Our pathway to decarbonisation continued

Decarbonisation and Net Zero

Decarbonisation is a strategic imperative for the Group and a core component of our Net Zero ambition and long-term climate resilience.

In alignment with IFRS S2, we identify and manage climate related risks and opportunities through defined governance, risk management processes and performance metrics. We tracked Scope 1 and Scope 2 emissions, together with total carbon footprint, against a 2022 baseline to assess progress and inform decision making.

The Group has delivered a **26% reduction of our total carbon footprint from our 2022 baseline** through disciplined execution, operational efficiency and targeted interventions across all operations. Improvements in energy efficiency, process optimisation and emissions management have contributed to measurable reductions while supporting operational reliability and cost discipline. These actions underpin our Net Zero Pathway and form part of a structured response to climate transition and physical risks, consistent with ISSB expectations.

GHG Scope 1 emissions (tCO₂e)

GHG Scope 2 emissions (tCO₂e)

Carbon emissions (tCO ₂ e)						2022 baseline	2025 target	2025 Absolute performance
	2021	2022	2023	2024	2025			
Scope 1	266 291	267 919	213 711	199 708	162 998	267 919	242 292	2025 performance against 2022 baseline 39% ▼

GHG emissions per business (tCO₂e)

By strengthening data quality, oversight and accountability, we continue to enhance our ability to manage climate related financial impacts and build a resilient, future ready business.

Our pathway to decarbonisation continued

Total carbon footprint (tCO₂e)

2025 carbon footprint (tCO₂e)

Scope 3 emissions and value chain engagement

Scope 3 emissions remain a material share of our total carbon footprint and are a central focus of our transition plan, given its link to suppliers, customers and logistics partners across the value chain.

During 2025, we deepened our strategic understanding of Scope 3 across all major categories, identifying areas of strength as well as critical opportunities for improvement. These insights are shaping our long-term decarbonisation approach and will inform the prioritisation and sequencing of future initiatives and target setting. The decrease observed during the year can be largely attributed to the disposal of the AECI Much Asphalt business which was a significant contributor to Scope 3 emissions.

Category (GHG Protocol)	2022 tCO ₂ e	2023 tCO ₂ e	2024 tCO ₂ e	2025 tCO ₂ e

Renewable energy for a sustainable future

Renewable electricity is now an established part of our energy mix. In 2023 we generated 840 MWh of electricity from renewables, increasing to 8 663 MWh in 2024 as new solar capacity came online. In 2025, renewable electricity consumption increased further to 16 669 MWh and the share of renewables in total Group electricity has reached 9% compared to 4% in 2024. This progress supports our Scope 2 decarbonisation pathway and improves resilience to grid constraints and price volatility.

We continued to reduce electricity consumption, with total electricity use decreasing from the 2022 baseline of 217 992 MWh to 180 923 MWh in 2025. These gains were driven by a combination of operational efficiency measures and the ramp-up of renewable energy projects.

Contribution of renewables to electricity consumption (Solar and Hydro) (MWh)

Renewable electricity self-generated (Solar) (MWh)

Electricity consumption trends and targets

Our pathway to decarbonisation continued

Strengthening resilience through decarbonisation

We are committed to developing a clear and credible decarbonisation pathway in support of our Net Zero by 2050 ambition. This pathway is underpinned by realistic short- and medium-term priorities, complemented by longer-term, aspirational initiatives. It reflects our intent to systematically identify, quantify and address future potential emissions reduction gaps through a combination of operational improvements, technology interventions, commercial and pricing mechanisms and, where appropriate, selective market based instruments. In doing so, we are strengthening the resilience of our business while positioning the Group for a transition to a lower carbon future.

Our decarbonisation agenda is a strategic driver of value creation. It supports the sustainability of our operations, enables our customers' transition journeys and reinforces continued access to capital in an environment of increasing climate regulation. Our primary focus remains on reducing Scope 1 and Scope 2 emissions, while enhancing data quality and expanding our influence over the most material Scope 3 categories. We continue to make measured progress against this pathway, advancing initiatives grounded in implemented projects and a robust pipeline of future opportunities, as we work towards neutralising our overall climate impact over the long term.

Indicative pathway (Scope 1 and 2)

Our Net Zero Pathway transition is how we move from commitment to action. It translates the 2050 ambition into a practical, phased roadmap that links site level initiatives to Group-wide emission reduction outcomes. The pathway maps opportunities across our global operations, classifying them into Priority 1, 2 and 3 initiatives and sequencing them over short-, medium- and long-term horizons.

Our pathway to decarbonisation continued

Our disciplined approach ensures that low and no cost efficiency measures are implemented first, while higher capital projects are evaluated and timed to deliver the greatest decarbonisation impact per rand invested.

Through this approach decarbonisation is pursued with value in mind: reducing risk and emissions, improving operational efficiency and energy security and positioning the Group as a partner of choice for customers seeking lower carbon solutions.

Verification and monitoring: South African sites

Verification and monitoring at key South African sites moved the Net Zero Pathway from planning into delivery. The focus was on Priority 1 and Priority 2 opportunities identified in earlier phases: low or no cost operational efficiency measures that can be implemented quickly (Priority 1) and moderate capital projects such as equipment upgrades and renewable energy installations that require further assessment (Priority 2). Site assessments at Chamdor, Modderfontein, Lilianton, Sasolburg, Chloorkop and Umbogintwini were used to confirm project status, collect evidence of savings and close data gaps.

Strengthening the abatement curve

Our verification activities confirmed that multiple projects are already delivering tangible energy and carbon reductions, supported by site level documentation and measurement. At the same time, additional opportunities identified through the verification process have been added to the project pipeline for further evaluation.

The verified data is now feeding into updated key performance indicators and refined reduction pathways for South African operations. This strengthens the cumulative abatement curve that underpins our phased Net Zero Pathway trajectory and supports a disciplined transition from early efficiency gains to larger, value accretive decarbonisation investments over time.

Net Zero Pathway implementation pipeline: implemented, completed and ongoing initiatives

Renewable energy	Heat recovery	Process optimisation	Technology
Business segment: Mining			
- Large scale on-site solar PV at Modderfontein (4 MW) and Sasolburg (1.5 MW) - Electricity generated from excess waste steam	- Optimised steam distribution, reducing heat losses and improving thermal efficiency - Boiler insulation improvements minimise energy losses	- Compressed air audits - Leak repair and pressure set points optimised - Automation enhancements at ANS and ammonia plants - Improved process stability and reduced energy and material losses	- Condition based monitoring on pumps - Predictive maintenance and improved motor efficiency - Catalyst optimisation at the nitric acid plant, improved conversion efficiency and reduced losses
Business segment: Chemicals			
Rooftop solar PV installation (1 MW) at Chloorkop	Waste heat recovered from process streams and reintegrated into operations	- Plant optimisation implemented to improve efficiency and run rates - Reduced shutdowns and energy intensive restarts - Vessel insulation, reduced excessive heating	- Improved Heating, Ventilation and Air Conditioning (HVAC) efficiency - External lighting upgraded from halogen to LED
Business segment: AECI Property Services			
–	- Steam blowdown heat recovery systems - Steam line insulation upgrades completed - Reduced thermal losses and improved steam efficiency	–	- Variable speed drives installed on high lift pumps - Improved demand and efficiency - Expanded metering improved visibility, control and loss
Business unit: Plant Health			
–	- Improved steam and condensate line insulation - Steam line tracing strengthened to manage heat losses - Enhanced cold system lagging	- Compressed air leak reduction programme implemented - Chiller plant optimisation underway - Lights and AC switch off measures reinforced	- LED lighting upgrades - Motion sensor installations - Energy management system deployed for improved monitoring

Our pathway to decarbonisation continued

Focus area	Description of upcoming initiatives
Renewable energy	Expansion of on-site solar PV installations where appropriate and assessment of power purchase agreements to further reduce grid dependency and Scope 2 emissions.
Energy management	Consider implementation of a Group-wide Energy Management System (EnMS) to improve data quality, enable real-time monitoring and embed energy performance into strategy.
Utilities efficiency	Additional compressed air, motor efficiency and steam network optimisation projects requiring moderate capital investment and detailed business cases.
Low carbon energy	Evaluation of green steam and alternative low carbon solutions to reduce reliance on fossil fuels for steam generation over the medium- to long-term.
Process technology	Larger scale process upgrades at energy and emissions intensive facilities to deliver sustained emissions reductions toward 2030 and beyond.
Digital integration	Integration of energy and carbon data into planning, capital allocation and performance management systems to support long-term decarbonisation.

International sites: Implemented initiatives and constraints

Our Net Zero Pathway moved from planning into action across our international sites. Australia, Indonesia, Tanzania, Zambia and Ghana were materially prioritised based on the energy and carbon intensive nature of the operations. At these sites, teams focused on short-term Priority 1 initiatives that:

These low and no cost actions target the main emission drivers identified in the desktop assessments and provide early, measurable contributions to our cumulative abatement curve.

The same analysis also highlighted the realities we must navigate as we decarbonise. Regulatory limits on solar in explosive risk areas, variable solar potential and limited influence over grid supply where power is provided by host mining operations all shape the mix and timing of future projects. These constraints inform our prioritisation logic, signalling where the pathway will lean more on process optimisation and partnership with energy providers as we progress our phased Net Zero journey.

Our pathway to decarbonisation continued

Country/theme	Implemented initiatives	Barriers and constraints
Australia 	- Transition from internal combustion engine to hybrid vehicles - Preventative maintenance on key equipment - Replacement of conventional lighting with LED lighting - Metering in place for electricity monitoring - Installation of motion sensors - Upgrade of automated control system - Implementation of mobile fuel monitoring	Solar installation limited by mining regulatory restrictions in explosive risk areas. Limited control over electricity supply where power is provided by host mining operations.
Indonesia 		No solar potential at present due to local climatic conditions. Limited control over electricity supply where power is provided by host mining operations.
Ghana 	- Preventative maintenance on key equipment - Replacement of conventional lighting with LED lighting. Metering in place for electricity monitoring - Installation of motion sensors	Limited control over electricity supply where power is provided by host mining operations.
Tanzania 		
Zambia 		

Identified decarbonisation opportunities across international sites

A pipeline of prioritised decarbonisation opportunities across our global operations underpins our Net Zero pathway and enhances long-term resilience

Our pathway to decarbonisation continued

Case study

AECI Mining: Product and portfolio transition

We are advancing our Net Zero Pathway through the progressive reformulation of product portfolios toward safer and lower carbon solutions. In 2025, the external launch of PowerBoost™, TNT and PETN free booster technology, at AECI Mining represented a major milestone in reducing the carbon and safety risks associated with traditional explosives.

The two component system, which relies largely on locally sourced, inert materials that only become sensitive at the point of use, lowers transport and storage risk, simplifies logistics and reduces emissions linked to imported inputs.

This innovation strengthens supply chain resilience, supports localisation and demonstrates how product design can simultaneously deliver safety, emissions reduction and socio-economic value.

AECI Mining Explosives, on-site charge up

Case study

AECI Mining: Operational decarbonisation

Decarbonisation within the Mining segment is central to the Group's 2030 targets and Net Zero by 2025 ambition, given its contribution to Scope 1 and 2 emissions. During 2025, renewable energy projects with a combined capacity of approximately 6.5 MW were commissioned at key manufacturing sites, reducing reliance on carbon intensive grid electricity and improving energy security.

These initiatives are supported by ongoing investments in emissions abatement, process optimisation and preventative maintenance, which are expected to deliver progressive reductions in direct emissions.

In parallel, digital initiatives are improving visibility of priority Scope 3 emissions across purchased materials, logistics and product use, while continued product innovation is enabling lower fuel consumption, reduced waste and improved energy efficiency at customer operations.

AECI Mining Chemicals, Sasolburg, South Africa, solar farm

Case study

Plant Health: Customer enablement

Plant Health contributes to the Net Zero Pathway through both operational efficiency improvements and the delivery of lower carbon solutions to farmers. Water and effluent recovery initiatives and reduced waste disposal at manufacturing sites lower energy demand and associated emissions, while enhanced metering supports future energy efficiency and renewable energy opportunities. On the product side, the portfolio increasingly focuses on biologicals, biostimulants and soil health technologies that improve nutrient uptake, reduce the need for repeated applications of conventional inputs and lower emissions per unit of yield. Supported by agronomic expertise and digital tools, these solutions enable more precise application, reduced losses to air and water and improved environmental performance across the agricultural value chain.

Umbogintwini, South Africa, smart farming

Our initiatives illustrate a coherent and execution focused Net Zero pathway that integrates product innovation, operational decarbonisation and customer enablement. By reducing emissions within our operations, reformulating products to lower lifecycle impacts and supporting customers' transition to more efficient and sustainable practices, we are building a credible, phased pathway aligned to our 2030 targets and 2050 Net Zero commitment, while strengthening safety, sustainability, resilience and long-term value creation across the value chain.

Our pathway to decarbonisation continued

Pricing and framework alignment

Climate change continues to shape the environment in which we operate, influencing both the risks we must manage and the opportunities we can pursue. In response, we are strengthening the integration of climate considerations into governance, strategy, risk management and pricing decisions. Our IFRS aligned disclosures demonstrate this commitment, supporting transparent disclosure, stronger resilience and a more disciplined response to the transition to a lower carbon future.

Carbon pricing

Currently, only our South African operations are affected by a carbon tax, which was introduced on 1 June 2019. The tax applies to companies exceeding specified GHG emission thresholds, particularly those using fossil fuels in stationary combustion equipment with a capacity of over 10 MW thermal. AECI Mining Limited, which produces nitric acid, is subjected to this tax based on process emissions from the production of nitric acid.

We renewed our carbon tax registration with the South African Revenue Service (SARS) and submitted our carbon tax accounts for 2023 and 2024. The carbon tax paid to the SARS in July 2025, covering our 2024 emissions, was R9.4 million (carbon tax paid in July 2024 covering our 2023 emissions: R5.9 million), with an expected 2025 emissions liability of R11.6 million, which is payable in July 2026.

National Treasury has confirmed that the carbon budget allowance of 5% will apply to 2025 emissions. However, for 2026 emissions and onwards, it is not likely that this allowance will be applicable and hence, this will increase our carbon tax liability.

Based on the 2026 budget design, the basic tax free allowance of 60% will be reduced from January 2026 onwards, as per National Treasury's discussion paper on phase 2 of the carbon tax. This will increase our carbon tax liability from 2026. To mitigate this, we have incorporated the carbon tax into our capital application process for informed investment decisions. We continue to work towards our Net Zero by 2050 goal, with active efforts to reduce carbon emissions across our operations.

Our sustainability and tax teams ensure compliance with carbon tax regulations while business units, supported by the sustainability team, focus on reducing emissions. Our GHG emissions and carbon tax liabilities undergo third party verification every year. In line with our Net Zero Pathway, we have identified key projects in energy, technology and supply chain areas and are focusing on the top five Scope 3 emissions categories, which will help us set specific targets to support our goal of achieving Net Zero by 2050.

Carbon tax liability by company

Company	2022 carbon tax liability Rm	2023 carbon tax liability Rm	2024 carbon tax liability Rm	2025 carbon tax liability (accrual) Rm
AECI Limited	1.0	1.1	1.5	1.8
AECI Mining Limited	7.3	3.3	6.1	7.6
East Asphalt (Proprietary) Ltd*	0.1	0.1	0.1	0.1
Much Asphalt (Proprietary) Ltd*	1.0	1.3	1.6	2.0
Spraypave*	0.1	-	0.1	0.1
Total	9.5	5.8	9.4	11.6

* Although these businesses have been disposed, carbon tax accrued from the previous year (2024) are reflected in the current reporting period

Forward focus

Looking ahead, as the carbon tax regime tightens and allowances reduce from 2026 onwards, we expect the cost of emissions to increase, reinforcing the value of early, well designed abatement projects. We will continue integrating carbon pricing into capital allocation and project appraisals, strengthening alignment with IFRS S1 and S2 and embedding climate related risks within our ERM Framework. Our focus will be on delivering a phased, disciplined decarbonisation trajectory across South African and international operations, refining our cumulative abatement curve, advancing renewable energy and innovation initiatives and building a verified project pipeline that supports our Net Zero by 2050 ambition while enhancing long-term resilience and competitiveness.

Our pathway to decarbonisation continued

Framework alignment

IFRS S2 / TCFD pillar

Governance

We maintain strong governance structures to ensure effective oversight of climate related risks and opportunities. Our Board receives quarterly updates on environmental performance, with climate related matters included as a standing agenda item. Oversight has been supported by the SESC¹, which monitored delivery of our sustainability strategy, Net Zero Pathway and broader ESG performance and the EHS Committee, which had oversight of environmental compliance, risk controls and incident management.

Executive accountability rests with our CEO, supported by the Vice President: Sustainability, ESG & EHS and the Group Sustainability Steering Committee. Together they coordinate strategy implementation across the Group, ensuring that climate considerations inform operational planning, risk management, capital allocation and stakeholder engagement.

Our leadership remuneration structure reinforces accountability, with ESG KPIs including emissions reduction, water stewardship and gender equality embedded within the long-term incentive framework.

Strategy

Climate change continues to shape our strategic outlook, influencing our operations, value chain, customer needs and long-term competitiveness. We recognise both the risks and opportunities associated with the transition to a low carbon and climate resilient economy.

Climate related risks

Physical risks:

Heightened water scarcity, El Niño-Southern Oscillation related climate variability, drought and extreme weather events, which may affect production continuity and infrastructure resilience.

Transition risks:

Escalating carbon tax exposure, increasingly complex regulatory expectations and evolving disclosure requirements.

Market and reputational risks:

Growing customer demand for sustainable, low carbon solutions and the need to demonstrate credible decarbonisation progress.

Strategic response

We are actively responding by:

Optimising current renewable energy programmes to enhance energy security and reduce Scope 2 emissions.

Driving product innovation, including lower carbon explosives, energy efficient technologies, advanced water treatment solutions and other climate aligned offerings.

Supporting customers across Mining, Chemicals, Plant Health and industrial sectors to reduce resource consumption and build climate resilience.

We have not yet undertaken formal climate related scenario analysis, but we recognise its importance for long-term resilience. Over the next reporting cycles, we will begin developing a structured scenario analysis approach to assess potential physical and transition impacts under different future climate pathways.

Our intention is to use recognised international frameworks to understand how climate change could affect our operations, value chain and markets and to inform future investment and strategic planning.

Risk management

Climate related risks are integrated into our ERM Framework. Risks are identified and assessed through a combined bottom-up process at site level and a top-down strategic assessment at Group level.

Risks are evaluated using a 5x5 likelihood and impact matrix, covering acute and chronic physical risks, policy developments, carbon pricing, market trends, technology shifts and reputational considerations. Assessments span short-, medium- and long- term horizons.

Climate related risk assessments directly inform:

- Operational planning and continuity
- Capital allocation and project approval
- Supply chain resilience and procurement strategy
- R&D focus areas
- Customer engagement and service offerings

We also assess interdependencies particularly between water availability, energy supply stability, emissions and supply chain disruption, to improve our understanding of systemic risk.

Metrics and targets

Key performance indicators 2025

We track a comprehensive set of environmental indicators to measure progress towards our Net Zero by 2050 ambition and our broader sustainability goals.

Scope 1 and 2 emissions:

366k tCO₂e
26% reduction from 2022 baseline

Renewable electricity:

9%
of total electricity consumption

Water consumption:

1 554k m³
13% reduction from 2022 baseline

Effluent discharge:

663k m³
12% reduction from 2022 baseline

Hazardous waste disposed:

10k tonnes
38% reduction from 2022 baseline

Creating value, connecting lives

Creating value, connecting lives continued

Our philosophy

Social responsibility goes beyond compliance. It is a core part of how we operate and how we build long-term value in the communities alongside our business.

We recognise that our social licence to operate is deeply connected to the wellbeing of the communities in which we operate. We believe businesses have a duty to contribute positively to society by supporting inclusive growth, community development and economic empowerment.

Our programmes are aligned with local, national and international development priorities, including the SDGs. Through responsible business practices, targeted social investment and strong partnerships, we aim to create shared value and contribute to lasting community resilience.

Our social investment philosophy is guided by the following key principles:

- We aim to operate in an ethical, sustainable and socially beneficial manner
- Our supported initiatives are grounded in international best practices for measurable impact
- We focus on long-term programmatic support to drive lasting change
- We strengthen community relationships to maintain our social license to operate
- We support ecosystem development to uplift the most vulnerable members of our communities
- Our funding prioritises measurable change anchored on our Theory of Change

Our evolution to strategic social responsibility

In recent years, we have deliberately that aspires to be integrated into the business. This evolution reflects global best practice, with a stronger focus on sustainable, developmental impact rather than short-term support.

As part of this shift, we have moved from supporting a wide range of individual initiatives to consolidating our efforts on a few flagship initiatives aligned with our strategic focus areas and intended social impact. This enables deeper engagement, stronger partnerships and more meaningful impact in our target areas.

Collaboration has been a key enabler of this approach. We actively work with selected partners to align objectives, strengthen delivery and maximise the collective impact of our investments.

Strengthening our monitoring and evaluation (M&E) processes has also been central to this evolution. Improved M&E allows us to better track progress, assess outcomes and use evidence to inform decision making and continuous improvement.

Cradle to Career

Creating value, connecting lives continued

Our social impact strategy

Governance led social impact

During 2025, we strengthened the governance and strategic alignment of our social impact work. Guided by our Social Responsibility Policy, King V™, the SESC¹ supported an integrated strategy aligned with international best practice. This strengthened oversight, accountability and transparency and shifted focus toward long-term programmes with measurable outcomes. Delivery is supported by strong governance, credible partners and improved monitoring. Greater alignment across the Group improved consistency and assurance while remaining responsive to local priorities. Sustainability considerations continue to guide decisions to build community resilience and long-term value.

Partnerships with key customers

We operate across multiple continents, reflecting the global nature of our operations and the markets we serve.

With an established presence across southern, central, east and west Africa, as well as Australia, Papua New Guinea (PNG) and Indonesia, we operate in diverse regulatory, social and cultural contexts. This scale allows us to apply a consistent, principle based approach to responsible business conduct, while tailoring social responsibility initiatives to local community needs and national development priorities.

Within Africa, AECI maintains a strong footprint across major mining jurisdictions:

- **South Africa:** Strategic partnerships with Foskor Mine, Valterra Mine and Ndalamo Resources focus on addressing critical water security challenges. These collaborations prioritise sustainable access to clean and safe drinking water, contributing to improved community health, resilience and trust
- **Botswana:** Collaboration with Debswana, KCM and KPC reflects a coordinated, long-term approach to social investment. The focus on quality education supports employee development, future employability and sustainable socioeconomic outcomes in established mining communities
- **Tanzania:** The partnership with Shanta Gold focuses on strengthening access to primary healthcare, responding to identified community needs and reinforcing community wellbeing and productivity
- **Democratic Republic of Congo:** Engagement with Tenke Mine demonstrates disciplined partnership in a complex operating environment. Our focus on economic development in the Fungurume communities supports enterprise development, livelihoods and local value creation
- **West Africa:** We are expanding with a focus on supporting local communities, fostering inclusive economic participation and aligning our social engagement with regional development priorities and customer sustainability objectives

Beyond Africa

Beyond Africa, we are in advanced stages of engaging key customers on our water stewardship programme in regions such as Indonesia and PNG.

Collectively, these partnerships demonstrate our disciplined, outcomes driven approach to social responsibility. By translating our strategic focus areas into targeted, locally relevant interventions, we strengthen our social licence to operate and create shared value across our global footprint.

Objectives:

We adopt a holistic, Cradle to Career approach to education, supporting learners from early childhood through to higher education and entry into the workforce.

Our key priorities:

- Ensure learners have access to basic human needs such as shelter, healthcare, food and water security
- Provide learning and development support, equipping learners with the tools, resources and support to succeed at each stage
- Advance education through targeted bursaries, ECD, literacy initiatives and STEM interventions

Our key programmes:

- A key component of the programme brings together several nonprofit organisations to support learners from ECD through to secondary school under our Cradle to Career programme. Afrika Tikkun, as the key partner provides holistic support across a child's life. This work is supported and enhanced by Siyafunda (boosting literacy in schools), the Startwell Foundation (eliminates stunting in South Africa) and Palesa Pads (reduces period poverty)
- The programme hosts our flagship Future Leaders Programme in partnership with Primestars
- Collaborative efforts with the Domino Foundation, Door of Hope and UNICEF provide integrated support for orphans and vulnerable children

~350

competition entries

Delivered in partnership with Primestars, the AECI Future Leaders Programme aims to become a national movement to cultivate leaders, problem solvers and innovators who will shape South Africa's future.

The programme is underpinned by a core belief that leadership is not inherited, it is cultivated and is a skill that can be nurtured and developed rather than an innate talent reserved for a few.

During the programme, high school learners are encouraged to take an active role in their communities and become advocates for positive change, driving initiatives that address local issues and improve quality of life.

Elma, a competition winner

Launched in February 2025, the programme engaged Grade 10 to 12 learners from underserved schools in Gauteng, Western Cape, KwaZulu-Natal, Free State and Mpumalanga.

Participants attended a purpose-made leadership film, received an AECI Future Leaders Toolkit to embed lessons from the film and competed for Future Leader of the Year by forming teams to launch school or community projects.

Project topics included food insecurity, bullying, gangsterism, gender based violence, mental health, disability inclusion, hygiene and community care and technology for education and safety.

As this programme matures, it is our intention to scale up the model into our global operations, thereby enhancing the reach and outcome of this leadership development initiative.

A key highlight from our Botswana social responsibility activities for 2025 was the donation of the Xhumo Primary School STEM lab. In partnership with Debswana and Xhumo Village, AECI Botswana handed over a STEM lab to Xhumo Primary School. The lab contains tech equipment such as drones and STEM kits. The idea behind the lab is to allow students in Xhumo Primary School the same learning opportunities as those in other locations such as Gaborone. The lab will benefit the school's 460 learners by providing them with opportunities to explore and innovate while improving their STEM related knowledge and skills. The development of STEM skills ties in strongly with both our social responsibility strategy and our Group strategy as we have a large focus on employing graduates with STEM qualifications. We hope this STEM lab is a step towards developing these essential skills in the country.

Malawi: Reviving Livelihoods Programme in Ntchisi District

Outputs

27

villages
supporteda yield of
~1 000kg
of beans

To strengthen food security and improve rural livelihoods, the Malawi Red Cross Society, in partnership with the Ministry of Agriculture and AECI, implemented a community based agricultural initiative in Ntchisi District. The district faces persistent challenges related to food insecurity, low agricultural productivity and limited access to farming inputs. Many families rely on subsistence farming but they lack fertilisers and crop protection products needed to improve yields.

This intervention was designed to address these gaps by providing targeted support to selected communities, strengthening their capacity to produce food and generate an income. The project reached 27 villages and provided 150kg of Nuah bean seeds, fertilisers and other essential inputs alongside training on sustainable farming techniques. The anticipated yield of ~1 000kg of beans is expected to contribute to both food security and income generation.

strategic
partners

1

flour processing
plant

In 2025, focus centred on supporting the construction of a flour processing plant at Endeavour Mining's Mana site, in partnership with the Burkina Faso Red Cross. Endeavour Mining is one of the Group's largest customers in the region and this collaboration reflects our approach to responsible business practice. By working alongside customers and trusted local partners to deliver initiatives that respond to community needs within the operational context, we seek to reinforce shared values around sustainable development while strengthening long-term stakeholder relationships.

The project is establishing a unit to process locally produced cereals into flour for sale in local and regional markets. It seeks to boost local cereal production and create employment opportunities in surrounding communities. The initiative is expected to reduce post harvest losses of cereals and increase the availability of quality flour in the region. Beyond direct economic benefits, the project supports broader community wellbeing by strengthening local value chains and enabling income generating activities, contributing to more resilient livelihoods and inclusive local development.

Our environmental sustainability programme addresses critical environmental and social challenges through initiatives spanning reforestation, waste management, renewable energy and water security.

Our key priorities:

- Promoting environmental stewardship through initiatives that support climate action, sustainable resource use and the transition to a green economy
- Providing timely disaster relief and crisis response to communities affected by environmental and socioeconomic shocks
- Supporting environmental education and nature conservation
- Strengthening conservation and long-term environment sustainability

Our key programmes:

- This programme integrates environmental stewardship with sustainable livelihood outcomes. We have long standing investments in environmental education resource centres and nature reserves at Umbogavango and Modderfontein in partnership with the Wildlife Environment Society of South Africa (WESSA). These reserves support environmental learning while protecting important local ecosystems
- Additional partners include Oliver's Village (sustainable livelihoods), Kusini Water (clean water access and income generating opportunities) PETCO (waste management and microenterprise development) and Palesa Pads (reducing period poverty with environmental benefits)

Our partnership with Kusini Water responds to this challenge through the installation of water treatment systems that use nanotechnology and macadamia nut shells to deliver clean, safe drinking water to rural, peri-urban and informal settlements. Alongside improved water access, the programme reduces the burden on women and children who collect water and supports job creation and skills development. Over the long-term, it contributes to improved health outcomes, reduced waterborne diseases and stronger local economic participation.

Fokor Primary School, Kusini, South Africa

Access to clean water for Fokor Primary School has been a persistent challenge affecting learning, hygiene and school operations. In partnership with Kusini Water, we installed a borehole at the school, directly benefiting 1 014 learners who now access safe drinking water and improved sanitation. The system has produced over 1.7 million litres of clean water and created a job to operate and maintain the infrastructure.

Employee volunteerism

Outputs:

2 084
employees volunteered

Objectives:

We actively promote employee volunteerism across our locations. In recent years we have strengthened our approach by shifting from *ad hoc* activities to more strategic and structured impact aligned volunteerism.

We now implement an annual employee volunteerism calendar aligned to key United Nations celebratory days. We have also partnered with our wellness department to introduce Running for a Cause across all major areas of operation.

Our key priorities:

- Engaging employees in volunteerism to drive a culture of giving back and foster meaningful relationships with the communities in which we operate
- Partnering with local, national and international organisations that share our commitment to social responsibility, working collaboratively to maximise impact
- Promoting employee participation in planned United Nations celebratory days to support selected social causes

Our employees supported ECD centres and primary schools within our Cradle to Career programme, contributing to early literacy development and nurturing a love of reading from a young age.

Literacy Day

Forward focus

Building on the strong foundations established during the reporting period, 2026 will be a year of consolidation, scale and deepening impact. Guided by our integrated social impact strategy and strengthened governance framework, our focus will be on amplifying what works, embedding consistency across regions and further mobilising our people as partners in impact. Following a successful national launch, our priority for 2026 is to scale the Future Leaders Programme in both reach and depth.

As our footprint continues to span diverse geographies, we will further embed consistent social responsibility standards across all regions. In 2026, the focus will be on strengthening alignment with our three core impact areas, enhancing comparability of outcomes and reinforcing international best practice in programme design, implementation and monitoring. We will also focus on strengthening governance, assurance and accountability, growing employee volunteerism and participation and scaling flagship programmes through the Level Up platform.

Creating value, connecting lives continued

Enterprise and supplier development (ESD)

Our ESD footprint mirrors our operating footprint across South Africa's industrial hubs.

Our programmes are anchored around communities linked to our major sites including:

- Sasolburg and surrounding Free State communities
- Modderfontein industrial node
- Woodmead head office in Gauteng
- Agricultural districts such as Standerton and the Gert Sibande region in Mpumalanga

Our approach is designed to shift from compliance driven spend to long-term, outcomes based partnerships. Working with implementation partners such as Khula!, Learning, Empowerment, Achievement and Progress and Independent Development Fund Capital, we focus on building resilient businesses that can participate sustainably in our value chain and in local economies.

From spend to sustained livelihoods

Our ESD portfolio supported 49 Small, Medium, and Micro Enterprises (SMMEs) through a combination of enterprise and supplier development interventions, spanning sectors such as manufacturing, agriculture, construction, recycling, engineering, logistics and environmental services.

These partnerships helped to sustain 418 jobs in both enterprise and supplier development business beneficiaries, reinforcing our contribution to local employment and income security in the communities where we operate.

Case study

Optimist Agri-farming: Pig production enterprise

Optimist Agri-farming is a pig production enterprise based in Ermelo and led by Phumzile Nkonyane and Lerato Phiri, both aged 30. The two entrepreneurs met while completing an animal production learnership sponsored by the Department of Agriculture and used their stipends to start a small broiler enterprise, laying the foundation for their agricultural venture. After being appointed as caretakers of a local farm, they transitioned into pig production, supplying local butcheries and the informal market.

Through this Khula! funded initiative, we partnered with the farmers to strengthen the sustainability and commercial viability of their enterprise. Prior to the intervention, the business faced operational constraints, including the use of mixed pig breeds with lower reproductive performance and deteriorated pig housing infrastructure that posed hygiene and biosecurity risks.

The programme is supporting the farmers to establish a uniform commercial breeding line, upgrade breeding facilities, implement structured financial and production record keeping systems and strengthen on-farm biosecurity practices.

As part of the intervention, the enterprise acquired five pregnant Camborough sows, a high performing commercial genetic line known for strong reproductive performance. These sows are expected to produce approximately 60 piglets per cycle, compared to the previous average of around 20 piglets, representing a significant increase in productivity and a projected revenue improvement of approximately 42%. Artificial insemination will also be introduced to further enhance genetic uniformity and herd performance.

As production expands and biosecurity protocols are strengthened, the enterprise anticipates creating additional employment opportunities. Looking ahead, the business aims to expand to approximately 20 breeding sows, explore on-farm feed production to reduce input costs and progressively transition into supplying the formal retail market.

Case study

Siditshile Projects: Broiler production enterprise

Siditshile Projects is a broiler production enterprise founded by 24 year old entrepreneur Nhlanhla Lungelo Skhumbuzo in Trichardt, Mpumalanga. After his aspirations of becoming a professional rugby player were curtailed, he redirected his discipline and determination towards agriculture, identifying poultry production as an opportunity within his community.

The business began in his backyard with 100 broilers supplied to informal markets. Through resilience and reinvestment, the enterprise secured a long-term lease agreement, enabling expansion to 500 birds per production cycle and creating opportunities to supply a formal market as a subcontractor to a larger company.

Through this Khula! funded initiative, we supported the farmer to improve operational efficiency and strengthen the sustainability of the enterprise. Prior to the intervention, the business faced key constraints, including manual drinking systems and inadequate heating infrastructure, both critical for chick survival in the region's cold climate.

As a result of the programme, production capacity has increased by an additional 500 chicks per cycle, effectively doubling output. An automated drinking system and gas heating have improved operational efficiency, strengthened biosecurity and reduced chick mortality. Financial management and record keeping systems are also being implemented to position the enterprise to access commercial funding.

Looking ahead, the business aims to expand production to approximately 5 000 birds per cycle, which will require additional poultry housing and labour, further contributing to local job creation and economic participation.

Creating value, connecting lives continued

Growing farmers into long-term suppliers

The Emerging Farmer Development Programme supports our objective of building resilient, inclusive agricultural supply chains. Delivered in partnership with Khula! and aligned stakeholders, the programme focuses on improving the commercial readiness of smallholding farmers in priority regions, including Standerton and the Gert Sibande district.

Interventions integrate financial capability (basic bookkeeping and access to accounting support), technical agronomy assistance (soil and water testing, crop and livestock advisory) and regulatory compliance support, including food safety and facility standards. Access to inputs and markets is facilitated through the Khula! ecosystem, enabling cost efficiencies and offtake opportunities.

The programme contributes to local economic development, job sustainability and the development of a future supplier pipeline aligned to our quality, safety and sustainability standards, supporting the Group's ESG objectives and 2030 social impact commitments.

Strengthening SMME business foundations

Across the enterprise development portfolio, we apply a diagnostic led approach to business support, ensuring interventions are tailored to the specific constraints and growth potential of each SMME. Support is targeted across key capability areas, including branding and market access, business strategy, costing and pricing discipline and the strengthening of operational systems to reduce inefficiencies and wastage.

These targeted interventions enabled several enterprises to stabilise operations, improve profitability and progress towards integration into the Group's and third-party supply chains. While the year included a planned reduction in construction sector beneficiaries following programme exits, the portfolio remained diversified across manufacturing, logistics, environmental services and agri-value chains. This rebalancing reflects a deliberate focus on sectors where SMMEs can build sustainable long-term capability and where we have strategic demand, reinforcing both developmental impact and commercial relevance.

Our supplier development initiatives focused on strengthening the sustainability and competitiveness of black-owned and community based suppliers through improved market access, pricing discipline and operational efficiency. Targeted interventions included pricing and margin reviews, business coaching to address cost drivers and inefficiencies and practical capacity building to close performance gaps.

- As a result, a local courier enterprise successfully transitioned from servicing a single site to operating across Sasolburg, Modderfontein and our head office, enabling asset acquisition, employment growth and improved service responsiveness
- A small enterprise, Liquatic, supported and scaled its waste management operations, contributing to our waste and biodiversity commitments while strengthening local economic participation
- Geographic contract expansion, asset investment by suppliers and the creation of 16 part-time jobs, demonstrating tangible local economic impact and progress towards inclusive, resilient supply chains

Preferential procurement is an important contributor to South Africa's transformation agenda and to our commitment to shared value. We continue to focus on increasing spend with black owned and black women owned SMMEs, while managing supply risk in specialised commodity categories such as ammonia and sulphur, where the supplier base remains highly concentrated.

Forward focus

We plan to deepen our focus on agriculture and food security, expand supplier participation in our value chain and concentrate more efforts in regions where we operate and can have the greatest social and economic impact. Priorities include increasing the representation of black, women owned and disability inclusive suppliers in core categories, enhancing absorptive capacity into our supply chain and strengthening outcome tracking.

By aligning ESD more tightly with procurement, material ESG topics and Group level targets, we are positioning our ESD programmes as a critical lever for shared value creation, supporting resilient local economies while strengthening supply chain security, transformation credentials and long-term license to operate.

Data driven value

Sustainable finance

We integrate sustainability considerations directly into capital allocation and financial decision making to support long-term value creation and risk management. During the reporting period, we concluded a review of our ESG metrics and approved a set of strategic focus areas. These focus areas reflect the most material environmental and social drivers of value, resilience and transition risk across the Group.

The approved focus areas provide a clear and consistent framework for prioritising capital allocation, guiding operational decision making and assessing progress against long-term targets.

These ESG focus areas underpin the Group's approved 2030 targets and are embedded into performance management and sustainability linked financing arrangements.

Sustainability-linked financing as a value lever

Our SLFF, overseen by the Group Treasury function, embeds sustainability performance into the Group's financial strategy by linking achievement against selected ESG KPIs to financing outcomes. The framework strengthens accountability, enhances transparency and supports access to competitive funding aligned to the Group's sustainability priorities.

Element	Description
Framework owner	Led by Group Treasury and supported by Group Sustainability
Strategic linkage	Sustainability KPIs integrated into financing terms
Verification approach	Independent external verification
Financial impact	Incentivisation through cost of capital mechanisms
Governance	Oversight through established financial and sustainability governance structures

Sustainability linked financing is positioned as an enabler of long-term resilience and capital efficiency rather than a standalone funding instrument.

Historically, the Group has reported environmental performance on an absolute basis, supplemented by year-on-year percentage movements. Following the introduction of the SLFF, the Group transitioned to intensity based metrics, aligning environmental performance with production volumes to enhance comparability and better reflect operational efficiency.

During 2025, portfolio changes, including the divestment of several businesses, combined with lower than anticipated production volumes, materially influenced the intensity metrics. As a result, certain SLFF linked intensity targets reflect a year-on-year deterioration. It is important to note that underlying absolute environmental performance improved across these indicators during the same period.

This divergence highlights the sensitivity of intensity based metrics to structural and volume related changes within the business. We continue to monitor both absolute and intensity measures to provide a balanced and transparent view of environmental performance, ensuring stakeholders are able to assess both operational efficiency and overall environmental impact.

Data driven value continued

Data governance

Robust data governance underpins the reliability, consistency and decision usefulness of our sustainability disclosures. ESG data is collected through defined systems and processes aligned with financial reporting disciplines, with clear accountability for data ownership and validation.

Aspect	Description
Data ownership	Defined accountability at Group and operational levels
Methodologies	Standardised calculation methods applied consistently
Controls	Internal validation and periodic review processes
Estimation	Documented assumptions applied consistently across periods
Integration	ESG data incorporated into performance monitoring and ERM

Forward focus

With baselines and targets now set, our focus has shifted to consistent execution, performance monitoring and transparent disclosure. The alignment between ESG metrics, capital allocation and long-term targets enhances the integrity of sustainability information for investors, lenders and other stakeholders.

Ongoing investment in data systems, governance and independent assurance supports the reliability and comparability of disclosures, demonstrating how ESG performance is measured, managed and integrated into our financial and strategic decision making.

These controls support comparability over time and strengthen the link between sustainability performance, risk oversight and strategic decision making.

Independent assurance enhances the credibility of our sustainability disclosures and supports stakeholder confidence. Selected environmental and safety metrics are subject to limited independent assurance, conducted in line with recognised assurance standards.

Metric category	Boundary	Level of assurance	Assurance provider
Scope 1 and Scope 2 greenhouse gas emissions	Group	Limited	Independent external provider
Water withdrawals and discharge	Group	Limited	Independent external provider
Selected safety indicators	Group	Limited	Independent external provider

The assurance scope, level and provider are disclosed transparently to enable informed interpretation by stakeholders.

Charting the future

Beyond today

The next five years will focus on disciplined delivery against clearly defined priorities that strengthen resilience, support growth and reinforce the Group's licence to operate. Our forward looking agenda is centred on embedding safety, sustainability and culture into planning, investment decisions and operational execution.

Our forward looking roadmap outlines the outcomes we will deliver over the next five years, the key performance indicators used to track progress and the critical dependencies that underpin execution.

The roadmap is anchored in five interconnected focus areas that translate strategy into action:

Together, these focus areas align sustainability outcomes with financial performance, capital allocation and leadership accountability.

Leadership commitment

Delivering this roadmap requires sustained leadership accountability and collective ownership. Leaders are expected to balance short-term performance with long-term resilience, allocate capital responsibly and ensure that commitments translate into measurable outcomes. Employees are expected to live the behaviours embedded in our Culture Compact and **Beyond Zero** values, prioritising Lived.Led.Shared acting with integrity and contributing to a culture of continuous improvement. Partners and stakeholders play a critical role through collaboration, trust and shared value creation. In doing so, we live our purpose **We are One AECI**, for a Better World translating intent into action and ensuring that the safety of our people, the sustainability of our operations and the resilience of our business remain inseparable as we create long-term value.

Appendix B: KPI definitions

Environment	Definition	Unit
1. Potable water consumption	Water purchased from public water authorities (e.g. Municipal water, Rand Water etc.). This includes potable water that is suitable for drinking, or any other water purchased for site operations.	m ³
2. Effluent Discharge to sea or sewer	Liquid effluents, treated or untreated, discharged from industrial sites into third-party systems such as sewers or oceans.	m ³
3. Scope 1 emissions	GHGs emitted directly from sources that are owned or controlled by AECI.	tCO ₂ e
4. Scope 2 emissions	Indirect GHG emissions that result from the generation of purchased or acquired electricity, heating, cooling and steam consumed by AECI.	tCO ₂ e
5. Total Carbon Footprint (Scope 1 and Scope 2)	The total amount of GHG emissions (Scope 1 and Scope 2) that are directly or indirectly caused by AECI's activities.	tCO ₂ e
6. Scope 3 emissions	Emissions that result from activities or assets not owned or controlled by AECI, but that AECI utilises through our value chain.	tCO ₂ e
7. Electricity from renewables	Electricity consumed by AECI from renewable energy sources such as solar or wind.	MWh
8. Total electricity consumption	Electricity consumed by AECI, either purchased from an external electricity supplier or internally generated.	MWh
9. Electricity purchased	Electricity consumed by AECI purchased from an external electricity supplier and exclude any self-generated electricity or electricity exported off-site to third parties.	MWh
10. Total energy consumption	Total direct energy use is the sum of all energy inputs (i.e. self-generated and/or purchased. Energy inputs include coal, steam, stationary diesel consumption, electricity, etc). This includes renewable energy	GJ
11. Net energy consumption	Total direct energy use is the sum of all energy inputs (i.e. self-generated and/or purchased. Energy inputs include coal, steam, stationary diesel consumption, electricity, etc). This excludes renewable energy	GJ
12. Recycled waste	Waste recovered from AECI and diverted from disposal for alternative use.	Tonnes
13. Hazardous waste	Hazardous materials produced by AECI and directed to an authorised disposal facility.	Tonnes
14. Recycled materials	Materials repurposed for use in AECI operations and not directed to disposal	Tonnes
15. Major environmental incident	An incident that has caused a disastrous environmental impact, with long-term effects, requiring major remediation.	Number
16. Serious environmental incident	An incident that has caused a serious environmental impact, with medium-term effects, requiring significant remediation	Number
17. Moderate environmental incident	An incident that has caused a moderate, reversible environmental impact, with short-term effects, requiring moderate remediation	Number
18. Minor environmental incident	An incident which has caused a minor, reversible environmental impact requiring minor or no remediation.	Number
19. Production volumes	Production includes the mixing, blending and dilution of one or more chemicals to form a new product with different chemical, physical and hazardous characteristics. Production volume includes all products manufactured by AECI businesses for internal and external customers, excluding toll manufacturing, traded products, mining operation blends on client sites and intermediary products that are used as raw materials in the production process unless it is sold as final products to customers.	Tonnes
Social	Definition	Unit
1. Health and Safety		
1.1 Fatality	A death resulting from an occupational injury regardless of the time between the injury and death. A fatal injury is an instantaneous work-related event or exposure that results in death.	Number
1.2 First aid Injury	An injury that can be treated from a first aid box or by a professional medical practitioner or nurse at a medical station and which does not require follow-up medical treatment or medical diagnostics.	Number
1.3 Total Recordable Incident Rate	Work-related injuries sustained by employees and any contractor or non-employee working under AECI supervision, which results in any of the following: death, days away from work, restricted duties or medical treatment beyond first aid. Work-related illnesses are included for employees and are recorded according to in-country occupational health standards and included once confirmed by a licensed professional and related to exposures during work-related activities at AECI.	Incidents per 200 000 hours worked over a rolling 12-month period
1.4 Occupational illness	Illness diagnosed by a relevant registered occupational medical practitioner, resulting from exposure to a hazard in the workplace that is known to result in harm to human health. Illnesses are recorded according to in-country occupational health standards and included on once confirmed by a licensed professional and related to exposures during work related activities at AECI.	Number
1.5 Occupational illness rate	Rate – Occupational illnesses per 200 000 hours worked over a rolling 12-month period.	Rate

Appendix B: KPI definitions continued

1.6 Transport incident	This expresses the number of incidents where vehicles transporting products are involved in an incident as per the definition of product transportation incidents	Number
1.7 Transportation Indicator of Performance (TiOP)	The TiOP is derived as follows: $TiOP = \text{Number of product transportation incidents} \times 1\,000\,000 / \text{Total number of kilometres travelled}$.	Rate
1.8 Major product transportation incident	A fatality to a member of the public. Major environmental impact (classified as major under environmental incident classification). Loss of licence to transport product. Incident attracts adverse negative national or international media attention from a reputable news authority with the AECI Company name mentioned. Full route closure lasting >24 hours (public/national road). Any community evacuation or sheltering due to actual danger	Number
2. Progress safety		
2.1 Process safety incident	An incident that resulted in a fire, explosion, or an episodic, unintended release of a hazardous chemical from primary containment or an excursion of pressure energy that causes harm and, in all cases, where chemicals and a chemical process were involved	Number
2.2 A reportable process safety incident	Refers to an event or situation that is required by law or policy to be reported to relevant authorities or stakeholders. The specific definition of a reportable incident can vary depending on the context, such as workplace safety regulations, environmental regulations, healthcare guidelines or other regulatory frameworks.	Number
2.3 Non-reportable process safety incident	Refers to an event that falls below predetermined thresholds or criteria established by regulatory requirements, organisational (AECI) policies, or industry standards and does not necessitate formal reporting to regulatory authorities.	Number
2.4 Process Safety Total Incident Rate	All process safety Incidents that occurred per 200 000 hours worked over a rolling 12-month period	Rate
3. Gender equality		
3.1 . Gender equality: top, senior and middle management levels	Female representation in the top, senior and middle management levels	Percentage
4. Leadership development	Employees who attended the AECI management development programmes.	Number
5. Learnerships/internships/bursaries	Employees who were awarded learnerships, internships, bursaries or study assistance	Number
6. Employee volunteerism	Employees who took part in community-related volunteerism initiatives.	Number
7. Social Responsibility	Actions taken to create a positive impact on the environment and society	Description
7.1 South Africa	Social responsibility project spend in South Africa.	Rm
7.2 International	Social responsibility project spend outside of South Africa	Rm
8. ESD Local community spend	Percentage of expenditure on local goods and services as a percentage of total expenditure on goods and service	Percentage
9. ESD	Number of qualifying SMMEs supported with financial and or operational/business assistance.	Number
10. Preferential procurement	Points awarded for procurement against qualifying suppliers in South Africa, per B-BBEE level score, including qualifying small enterprises, exempted micro enterprises, Black-owned, >30% Black women-owned and discretionary bonus points.	B-BBEE points achieved
Governance		
Definition		Unit
1. Responsible leadership		
1.1. Leadership accountability	AECI's Board and Exco are accountable for sustainability	Description
1.2. Stakeholder engagement	AECI makes sustainable business decisions which consider the interests of all stakeholders.	Description
1.3. Remuneration practices	AECI's performance criteria in our remuneration practices for governing body members and senior executives include economic, environmental and social objectives	Description
2. Ethical business	AECI has appropriate business policies, procedures and practices in place. All AECI employees attend ethics training and awareness sessions. Where required, declarations on "Conflict of Interest" are made. AECI has an anonymous tip-off hotline. AECI has a legal and compliance function to provide advice on ethical matters.	Description
3. External assurance	AECI receives independent external assurance on applicable standards in place for sustainability reporting and environmental legal compliance.	Description
4. Regulatory reporting	AECI submits regulatory reports which relate to, for example, AECI's water use licence, air emissions licence, carbon tax, GHG reporting and environmental incidents.	Description

Appendix C: Assurance statement

Assurance statement

Independent Assurance Practitioner's Limited Assurance Report on Selected Key Performance Indicators

To the Directors of AECI Limited

Report on selected key performance indicators

We have undertaken a limited assurance engagement on selected key performance indicators (KPIs), as described below and presented in the Sustainability Report 2025 of AECI Limited (AECI) for the year ended 31 December 2025 (the Report). This engagement was conducted by a multidisciplinary team including environmental, health, safety and assurance specialists with relevant experience in sustainability reporting.

Subject matter

We have been engaged to provide a limited assurance conclusion in our report on the following selected KPIs, marked with a “^”, as set out in Appendix A (pages 84 and 85) of the Report. The selected KPIs described below have been prepared in accordance with the relevant KPI definitions as set out in Appendix B of the Report and the detailed AECI Sustainability Data Reporting Standard (“reporting criteria”). The detailed AECI Sustainability Data Reporting Standard is available on request.

Environment performance data

Environment performance data	Unit of measurement	Boundary
Environmental incidents (Major and Serious)	Number	AECI Group
Environmental incidents (Moderate)	Number	AECI Group
Environmental incidents (Minor)	Number	AECI Group
Potable water consumption	m ³	AECI Group
Effluent discharged to sea and sewer	m ³	AECI Group
Hazardous waste disposed	Tonnes	AECI Group
Recycled waste	Tonnes	AECI Group
GHG emissions: Scope 1	Tonnes CO ₂ e	AECI Group
GHG emissions: Scope 2	Tonnes CO ₂ e	AECI Group
GHG emissions: Total carbon footprint (Scope 1 and Scope 2)	Tonnes CO ₂ e	AECI Group
Electricity purchased	MWh	AECI Group
Total energy consumption	GJ	AECI Group
Production volumes	Tonnes	AECI Group

Safety performance data

Safety performance data	Unit of measurement	Boundary
Fatalities	Number	AECI Group
First aid injuries	Number	AECI Group
Total recordable incident rate (TRIR)	Rate	AECI Group
Occupational illness rate (OIR)	Rate	AECI Group

Process safety: Reportable incidents	Number	AECI Group
Process safety: Non reportable incidents	Number	AECI Group

Gender equality performance data

Gender equality performance data	Unit of measurement	Boundary
Gender Equality: female representation in top, senior and middle management levels	Percentage	AECI Group

Appendix C: Assurance statement continued

Directors' responsibilities

The Directors are responsible for the selection, preparation and presentation of the selected KPIs in accordance with the reporting criteria. This responsibility includes the identification of stakeholders and stakeholder requirements, material issues, commitments with respect to sustainability performance and design, implementation and maintenance of internal control relevant to the preparation of the Report that is free from material misstatement, whether due to fraud or error. The Directors are also responsible for determining the appropriateness of the measurement and reporting criteria in view of the intended users of the selected KPIs and for ensuring that those criteria are publicly available to the Report users.

Inherent limitations

The Greenhouse Gas (GHG) emission quantification is subject to inherent uncertainty because of incomplete scientific knowledge used to determine emissions factors and the values needed to combine emissions of different gases.

Our independence and quality management

We have complied with the independence and all other ethical requirements of the *Code of Professional Conduct for Registered Auditors* issued by the Independent Regulatory Board for Auditors (IRBA Code), which is founded on fundamental principles of integrity, objectivity, professional competence and due care, confidentiality and professional behaviour. The IRBA Code is consistent with the corresponding sections of the International Ethics Standards Board for Accountants' *International Code of Ethics for Professional Accountants (including International Independence Standards)*.

Deloitte & Touche applies the International Standard on Quality Management 1, which requires the firm to design, implement and operate a system of quality management including policies or procedures regarding compliance with ethical requirements, professional standards and applicable legal and regulatory requirements.

Assurance practitioner's responsibility

Our responsibility is to express a limited assurance conclusion on the selected KPIs based on the procedures we have performed and the evidence we have obtained. We conducted our assurance engagement in accordance with the International Standard on Assurance Engagements (ISAE) 3000 (Revised), *Assurance Engagements other than Audits or Reviews of Historical Financial Information*, issued by the International Auditing and Assurance Standards Board. This standard requires that we plan and perform

our engagement to obtain limited assurance about whether the selected KPIs is free from material misstatement.

A limited assurance engagement undertaken in accordance with ISAE 3000 (Revised) involves assessing the suitability in the circumstances of AECI's use of its reporting criteria as the basis of preparation for the selected KPIs, assessing the risks of material misstatement of the selected KPIs whether due to fraud or error, responding to the assessed risks as necessary in the circumstances and evaluating the overall presentation of the selected KPIs. A limited assurance engagement is substantially less in scope than a reasonable assurance engagement in relation to both risk assessment procedures, including an understanding of internal control and the procedures performed in response to the assessed risks. The procedures we performed were based on our professional judgement and included inquiries, observation of processes followed, inspection of documents, analytical procedures, evaluating the appropriateness of quantification methods and reporting policies and agreeing or reconciling with underlying records.

Given the circumstances of the engagement, in performing the procedures listed above we:

- Interviewed management and senior executives to obtain an understanding of the internal control environment, risk assessment process and information systems relevant to the sustainability reporting process;
- Inspected documentation to corroborate the statements of management and senior executives in our interviews;
- Performed a walkthrough of the processes and systems to generate, collate, aggregate, monitor and report the selected KPIs;
- Inspected supporting documentation on a sample basis and performed analytical procedures to evaluate the data generation and reporting processes against the reporting criteria; and
- Evaluated whether the selected KPIs presented in the Report are consistent with our overall knowledge and experience of sustainability management and performance at AECI.

The procedures performed in a limited assurance engagement vary in nature and timing and are less in extent than for a reasonable assurance engagement. As a result, the level of assurance obtained in a limited assurance engagement is substantially lower than the assurance that would have been obtained had we performed a reasonable assurance engagement. Accordingly, we do not express a reasonable assurance opinion about whether AECI's selected KPIs have been prepared, in all material respects, in accordance with the accompanying AECI reporting criteria.

Limited assurance conclusion

Based on the procedures we have performed and the evidence we have obtained and subject to the inherent limitations outlined elsewhere in this report, nothing has come to our attention that causes us to believe that the selected KPIs as set out in the Subject Matter paragraph above for the year ended 31 December 2025 are not prepared, in all material respects, in accordance with the reporting criteria.

Other matters

The maintenance and integrity of the AECI's website is the responsibility of AECI's management. Our procedures did not involve consideration of these matters and, accordingly, we accept no responsibility for any changes to either the information in the Report or our independent limited assurance report that may have occurred since the initial date of its presentation on AECI's website.

Restriction of liability

Our work has been undertaken to enable us to express a limited assurance conclusion on the selected KPIs to the Directors of AECI in accordance with the terms of our engagement and for no other purpose. We do not accept or assume liability to any party other than AECI, for our work, for this report, or for the conclusion we have reached.
